## Idaho Department of Correction

The purpose of this document is to describe current and historic statistical information regarding offenders incarcerated or supervised by the Idaho Department of Correction (IDOC). At the end of Fiscal Year (FY) 2010 the incarcerated population was 7,504 offenders and the supervised population was 13,902 offenders. Only felony offenders are committed to the Idaho Department of Correction for incarceration or supervision.

Incarcerated offenders include Termers, Retainer Jurisdiction (Riders) and Parole Violators (Chart 1). Termers are offenders sentenced to a term of imprisonment by the courts. Offenders can also be returned to Term by the parole commission upon parole revocation. Riders serve a 120-day sentence of incarceration at a specialized facility, where they are assessed to determine needs and receive intensive programming and education. The court retains jurisdiction over Riders and determines whether the offender should be placed on Probation or sentenced to Term upon completing the Rider. Parole Violators are offenders who violated the conditions of their parole or committed a new crime while on parole and are awaiting a revocation hearing from the parole commission. At the end of FY 2010 IDOC incarcerated 6,263 Termers, 871 Riders and 370 Parole Violators.

In Idaho there are two types of supervision for offenders. The first is Probation, a period of community supervision by the Department. Historically, the courts sentence almost two thirds of felony offenders to Probation (Chart 1). Probationers make up the majority of supervised offenders. At fiscal year end there were 11,055 probationers being supervised by the Department. The second type of supervised offender is the parolee. Offenders are eligible for Parole supervision after they have served the determinate portion of their prison sentence. The Parole Commission has the authority to grant Parole once offenders have met specified conditions. At the end of fiscal year 2010, there were 2,847 offenders on Parole.

To understand how the IDOC system works, one must first understand how offenders come to the department, how they flow through the system and how they are eventually discharged. Chart 1 helps illustrate the process.

All commitments to IDOC result from a court order. Once an offender is found guilty, the courts decide what status they will be sentenced to (Probation, Rider or Term incarceration) and for how long. The blue lines in Chart 1 represent these commitment decisions. The percentages represent the historical average portion for commitment status. Historically, only 15% of initial court orders sentence offenders to Term.

The green lines in the chart represent offender moves from one status to another and the historical averages for moves from each status. The system process can be described as follows; an offender may enter Term incarceration from a new court commitment or as a failed Rider or from a revoked Probation or from a revoked Parole. The Term offender may be paroled or discharged. Status change and discharge decisions for Probationers and Riders are made by the courts. Parole decisions for Term offenders are made by the Parole Commission. Violation, revocation and early discharge decisions for Parolees are also made by the Parole Commission.

**Chart 1**  
Flow of Offenders

Historic Patterns of Court Commitments and Offender Flow Through the Idaho Department of Correction

Percentages represent averages from FY 1996 through 2009

Note: The historical parole revocation rate is the product of the Parole to Parole Violator moves multiplied by the Parole Violator to Term moves, or about 40%

**Idaho State Prisons**

The State of Idaho incarcerates offenders in eight state run institutions, one privately operated institution and five community work centers that have a combined operating capacity of 7,072. There were also 504 IDOC offenders temporarily housed in county jail beds.

**Idaho Correctional Institution Orofino (ICIO)**

ICIO is modified from its former use as a state hospital mental health facility. This prison houses male offenders of all custody levels. This facility also houses protective custody offenders. The operating capacity is 541 beds, 100 offenders participating in the work camp are housed separately. Program areas include anger management, cognitive programming, drug and alcohol education, therapeutic community, literacy, special and secondary education and workforce development.

**Idaho Maximum Security Institution (IMSI)**

IMSI is one of the five institutions located south of Boise and is the highest security prison. It opened in November 1989 to confine Idaho's most violent and problematic

offenders. The population includes a large number of mental health offenders in the acute mental health services program and Idaho's inmates under sentence of death. The operating capacity is 424 offenders. Programs are limited because of the high security risks but do include anger management, cognitive programming, special and secondary education, and drug and alcohol groups.

#### Idaho State Correctional Institution (ISCI)

ISCI is the department's largest prison. It is the main facility for long-term male, medium custody offenders. The compound includes a chapel, recreation center, education center, infirmary and a large Correctional Industries operation. All incoming male offenders go through ISCI's reception and diagnostic unit prior to institutional placement. The operating capacity is 1,688 offenders. Programming is widely available and includes anger management, cognitive programming, drug and alcohol programming, pre-release assistance, literacy, special and secondary education and workforce development. Additionally, ISCI houses the Behavioral Health Unit (BHU) which provides sheltered living and mental health services.

#### South Idaho Correctional Institution (SICI)

SICI houses minimum-custody offenders in a dormitory setting. A 100-bed parole release center (PRC) focuses on substance abuse issues and helps ease the transition for those near the end of their sentence. The total operating capacity is 656 offenders. Programming includes anger management, cognitive programming, therapeutic community, pre-release assistance, literacy, special and secondary education, workforce development and drug and alcohol programming.

#### St. Anthony Work Camp (SAWC)

SAWC is a former regional hospital converted to a work camp, located in the town of St. Anthony. It serves low-risk, minimum and community custody males. The program focus is to provide a work therapy program through full-time paid employment. Offenders also participate in community service projects. The operating capacity is 240. Programs include cognitive programming, pre-release assistance, drug and alcohol groups, literacy, secondary education and workforce development.

#### North Idaho Correctional Institution (NICI)

NICI is a former military radar station north of the town of Cottonwood. This prison houses males in the Retained Jurisdiction (Rider) program and term sex offenders. It focuses on programming offenders who might be viable candidates for probation rather than incarceration. The operating capacity is 414. Programming includes sex offender treatment, cognitive programming, drug and alcohol treatment, parenting and relationship classes, literacy, secondary and special education and workforce development.

#### Idaho Correctional Center (ICC)

ICC opened in July 2000 as the first state-owned, privately operated facility in Idaho. Corrections Corporation of America is currently the contracted prison operator. It houses medium and minimum custody male offenders. The operating capacity is 2,080 offenders. Programming includes literacy, special and secondary education, drug and

## FY 2009 Annual Statistical Report

alcohol treatment, cognitive programming, anger management, therapeutic community, sex offender programming and workforce development.

### Pocatello Women's Correctional Center (PWCC)

PWCC is designed specifically to meet the unique program and security needs of female offenders. The institution includes the female reception and diagnostic center. It houses all custody levels including inmates under sentence of death. The institution also operates a work release/work crew program as part of its community transition release program. Operating capacity is 295. Programs include mental health, drug and alcohol treatment, cognitive programming, literacy, special and secondary education, post traumatic stress disorder therapy, building healthy relationships and workforce development.

### South Boise Women's Correctional Center (SBWCC)

This minimum-custody facility houses females in the retained jurisdiction program and therapeutic community. Women are housed in a dorm-like setting. Their time is focused on specialized classes and programming. Operating capacity is 284 offenders. Programming includes anger management, cognitive programming, building healthy relationships, drug and alcohol treatment, literacy, secondary and special education and workforce development.

### Community Work Centers (CWC)

Community Work Centers house minimum and community custody offenders. Community custody offenders may participate in work release activities. A portion of these offenders' wages is returned to the CWC to offset housing and supervision expenses. The CWC program allows offenders to re-establish community ties, develop work skills, acquire employment and save money to help with the expenses they will face when they transition back into the community. Residents at the Work Centers can participate in education programs offered through local schools, colleges, universities, and district programs. Programs allow them to receive cognitive programming, substance abuse treatment, secondary education and selected vocational training.

There are a total of 450 community work center beds. The Nampa CWC houses 85 male offenders, Twin Falls CWC houses 81 male offenders and Idaho Falls CWC houses 84 male offenders. SICI also operates a work center with an operating capacity of 100. The female CWC is located in Boise and has an operating capacity of 100 offenders.

In addition to these institutions, the IDOC Community Corrections Division (CCD) operates seven Probation and Parole districts that correspond with the seven judicial districts. Each district operates a number of satellite offices, as well. 188 Probation and Parole Officers supervised 11,055 probationers and 2,847 parolees at end of FY 2010.

# Idaho Facility Locator Map

### Incarcerated Offender Demographics

This section describes the characteristics of the incarcerated population. There were 7,504 incarcerated offenders under the jurisdiction of the Idaho Department of Correction at the end of fiscal year 2010. The supporting data for these charts can be found in the June 2010 edition of the Standard Reports in Appendix 1.

Chart 2 illustrates the three types of incarcerated offenders and the distribution in Idaho's prisons. Term offenders make up the vast majority of incarcerated offenders.

Chart 3 indicates a significantly higher incidence of incarceration for male offenders than for female offenders. There were 6,721 males and 783 females incarcerated at the end of FY 2010.

Chart 4 represents the ethnic distribution of the incarcerated population. The population is primarily white as is the population of Idaho. Hispanics tend to be over-represented in the incarcerated offender population.

**Chart 4  
Incarcerated Offenders by Ethnicity**

Chart 5 illustrates the incarcerated population by crime group as indicated by the offender's worst crime for the current period of incarceration. About 49% are incarcerated for non-violent offenses (Drug, Property and Alcohol). This has dropped dramatically since 2007, when more than 54% were incarcerated for non-violent crimes.

**Chart 5  
Incarcerated Offenders by Crime Group**

There is a clear distinction between Crime Groups by gender. Chart 6 shows the male Crime Group distribution. There were 6,721 male offenders incarcerated at the end of FY 2010. This chart shows a distribution similar to the one in Chart 5 because more than 89% of incarcerated offenders are male. About 46% of males are incarcerated for

non-violent offenses (Drug, Property and Alcohol). At the end of FY 2007, 51% of males were incarcerated for non-violent offenses.

**Chart 6  
Male Incarcerated Offenders by Crime Group**

Chart 7 shows the female Crime Group distribution. There were 783 female offenders incarcerated at the end of FY 2010. This distribution is clearly different than the one for males. In fact, more than 78% of the females are incarcerated for non-violent offenses (Drug, Property and Alcohol). At the end of FY 2007, 83% of females were incarcerated for non-violent offenses.

**Chart 7  
Female Incarcerated Offenders by Crime Group**

Chart 8 shows the age distribution of the incarcerated population. The values represent the offenders' age at the end of FY 2010. The wide variance in age presents challenges in a prison setting. The average incarcerated offender age is increasing. The average age of incarcerated offenders at the end of FY 2010 was 36.7. The average age of incarcerated offenders at the end of FY 2000 was 34.6. IDOC is also experiencing an increase in the number and portion of offenders in the elderly category.

## FY 2010 Annual Statistical Report

At the end of FY 2009, 13.6 % (1,029 offenders) of incarcerated offenders were over age 50. At the end of FY 2000, 8.8% (442 offenders) were over 50.

**Chart 8**  
**Incarcerated Offenders by Age Group**

### Incarcerated Offender Population Growth Patterns

Since the end of FY 1980, the incarcerated population has increased from 915 to 7,504. Since FY 1995, the incarcerated offender population has more than doubled, up from 3,061. In the last decade, the male portion of the incarcerated offender population has increased 36% and the female incarcerated offender population has increased 53%. After showing essentially no growth between 2007 and 2009, the male incarcerated offender population increased to 6,721 in 2010, while the female population was relatively unchanged.

Chart 9 shows the male, female, and total incarcerated populations at year end since 1980. Though the female population is still a small portion of the overall incarcerated population and has leveled off in recent years, the growth since 2000 has been tremendous and continues to present challenges as the Department of Correction prepares plans for managing this population group.

Chart 10 illustrates the annual percent increase for the male and female incarcerated offender populations since 1995. Incarcerated statuses include Term, Rider and Parole Violator. The male incarcerated offender population has increased an average of 6.0% per year. The female population has increased at nearly double the male rate with an average annual percent increase of 10.0%. The annual percent increase for both males and females has moderated over the last five years with an average annual growth of 3.0% for males and 1.6% for females.

**Chart 10**  
**Incarcerated Offender Annual % Increase by Gender**

Chart 11 shows the annual count of incarcerated offenders by incarcerated status since 1996. Annual data is only shown since fiscal year 1996, because the analysis involved requires detail that has only been available since then. Fiscal years 1998, 2003, 2008, and 2009 are noteworthy because of their small or negative growth. The incarcerated offender population growth in 2009 is due nearly entirely to the Rider status.

**Chart 11**  
**Incarcerated Offenders by Status and Fiscal Year**

The small increases in 1998, 2003, 2008 and 2009 are noteworthy because they mark changes from historical patterns, as can be seen in Charts 10 and 11. The small growth in 1998 was due primarily to abnormally low admissions to prison, the small growth in 2003 was due primarily to a dramatic increase in the number of releases from prison, and the reduction in incarcerated offenders beginning in 2008 was due the convergence of unexpectedly low admissions to prison and unexpectedly high releases (Chart 12).

**Chart 12**  
**Admissions to and Releases From Prison by Fiscal Year**

Court commitments can be sorted by status type and crime group. Chart 13 shows the portion of court commitments sentenced to Probation, Rider and Term by year. Note the clear change in court commitment rates to Probation that occurred in 1999 and 2000. These commitments migrated to Term, resulting in a substantial increase in the portion of all commitments that went to Term during that period. Rider commitment rates have remained essentially constant over the entire period. Term commitments went from about 13% in 1998 to 18% in 2000 and 2001. In recent years, the portion of offenders that were sentenced to Probation and Term moved back toward the historical patterns of 1996 through 1998, in stages. The portion of total commitments sentenced to Term for the period 2002 through 2006 was still nearly 3% higher than for the period 1996 through 1998. In 2007, we began to see a steady decline in the portion committed to Term, and in 2009, the Term commitment portion returned to the historical level of 1996 through 1998.

**Chart 13**  
**Portion of Total Commitments by Status**

The primary contributor to increased Term commitments was Drug crimes. This can be seen in Chart 14, which shows Term commitments by crime type and year. In Chart 14, values are only shown for Drug crimes because it is the largest commitment. Although Drug crimes are still the largest single contributor to prison commitments, commitments for Drug crimes decreased steadily from 2007 to 2009. The other crime groups have experienced growth more consistent with the Idaho population growth.

**Chart 14**  
**Court Commitments to Term by Fiscal Year and Crime**

Although new court commitments are the obvious entry point for Term, there are admissions to Term from other sources. Offenders may also go to prison because of a failed Rider, revoked Probation or revoked Parole. Chart 15 shows all admissions to Term from FY 1996 through 2010. Historically, about 66% of all admissions to Term come from sources other than direct court commitments. Since 2003, revoked Probation has contributed more offenders to Term than new court commitments. Since 2009, Parole revocations contributed more admissions to prison than any other source.

**Chart 15  
Term Admissions by Type and Year**

Chart 16 shows total admissions to, and releases from Term, by year. Note the dip in admissions in 1998, and again in 2002. We can clearly see the influence of these dips on releases. Releases lag admissions by about two years. In fact, the average length of stay in Term is about two and a half years. Based on this pattern, we anticipated a decline in releases in 2010, which was not evident, but is expected to occur in 2011. Note that in 2008 and 2009 the admissions were actually lower than the releases, hence, a decrease in the Term population for these years.

We generally discuss admissions and releases by crime groups or by Violent and Non-violent crime types. For our next discussion, we'll address lengths of stay and releases from Term as they relate to Violent or Non-violent crimes because it allows us to reduce the number of variables while maintaining the essential data content. Generally, Idaho Violent crime types are similar to those described in Uniform Crime Reporting (UCR) references. This is essentially the same as grouping our Alcohol, Drug and Property crimes into the Non-violent category, and Assault, Murder & Manslaughter and Sex crimes into the Violent category. This allows us to group by important aspects of analysis information such as typical sentence length and length of stay.

**Chart 16**  
**Inmate Admissions and Releases**

Chart 17 shows court commitments to Term by crime violence and year. The 1998 and 2002 dips in total admissions show up mostly in Non-Violent crime commitments. The higher number of commitments for Non-Violent crimes beginning in 2001 parallels the increase for Drug crimes seen in Chart 14. So does the reduction for 2007 through 2009.

**Chart 17**  
**Court Commitments to Term by Crime Violence and Fiscal Year**

In Idaho, offenders are incarcerated with a two-part sentence. The first part is the fixed or determinate portion of the sentence. The offender will typically serve all of the determinate sentence. The second part is the indeterminate portion of the sentence. The Idaho Commission for Pardons and Parole may grant parole for any portion of the indeterminate part of the sentence. Offenders are generally not incarcerated for their full sentence.

Chart 18 shows the average length of stay by release year and crime violence for offenders whose initial court commitment was to prison. Note the Violent crime length of stay has had fluctuations but remains relatively constant, while the Non-violent group has experienced a clear and persistent increase in length of stay. Historically, about two thirds of all initial court commitments to Term are Non-violent offenders and one third are Violent. Since Violent offenders spend nearly twice as much time incarcerated as Non-violent offenders, at the end of 2010, nearly 51% of all inmates were convicted for Violent crimes.

**Chart 18**  
**Length of Stay by Crime Violence and Fiscal Year**

Although some would like to attribute the increased length of stay for Non-violent crimes to mandatory minimum sentences for Drug Trafficking crimes, these crimes, by themselves cannot account for the dramatic increase in length of stay. Chart 19 shows the indeterminate sentence length for Violent and Non-violent prison commitments since 1996. As in Chart 18, Violent crime sentences have been relatively constant, while Non-violent crime sentence length has steadily increased. It appears that the increase in sentence length, including mandatory minimum sentences, is a manifestation of the “tough on crime” bias that has pervaded the criminal justice system for the last two decades. During the period 1996 through 2010, Violent offenders received an average full term sentence length of 137 months. Non-Violent offenders sentence length increased from 64 to 96 months and averaged 80 months.

**Chart 19**  
**Sentence Length by Crime Violence and Fiscal Year**

Chart 20 shows the number of releases by year, for initial Term commitments of Non-Violent offenders. The dip in paroles in 2000 is related to the dip in total admissions to prison in 1998 shown in Chart 17. Almost 80% of Non-violent offenders are paroled from their initial court commitment.

**Chart 20**  
**Non-Violent Term Releases by Type and Fiscal Year**

Length of stay by release type and fiscal year for initial court commitments of Non-Violent offenders is shown in Chart 21. Note that length of stay has increased for both paroles and discharges. Length of stay prior to initial parole on the offender's first incarceration

has increased from about two years for the period 1996 through 1998, to about three years by 2010. Sentence length is the primary contributor to this increase in length of stay (Chart 19). This can also be seen in the increase in length of stay for those offenders who discharged from their sentence without ever paroling. For these offenders, length of stay prior to discharge increased from about three years for the period 1996 through 1998, to a little more than four years for the period 2005 through 2010. A recent analysis indicates that we would see a reduction of about 800 in bed demand over a four year period, if we could return to the 1996 level of sentence length for non-violent offenders.

**Chart 21**  
**Length of Stay for Non-Violent Crimes by Release Type and Fiscal Year**

Chart 22 shows the number of Violent offenders released from their initial prison commitment by year and release type. Only 74% of Violent offenders were paroled from their initial commitment. The rest topped out.

**Chart 22**  
**Violent Offender Term Releases by Type and Fiscal Year**

Length of stay by release type and year for Violent offenders is shown in Chart 23. Note that length of stay remained relatively constant for paroles, but discharges had a period of longer lengths of stay from 2002 through 2005 and again in 2007 through 2009.

**Chart 23**  
**Length of Stay for Violent Crimes by Release Type and Fiscal Year**

We have concentrated our analysis on the Term population, but the Rider population merits some discussion because it is the second largest component of the incarcerated population. Chart 24 shows the monthly Rider population since 1995. The Rider population has been very volatile since 2002. There is a strong seasonal pattern for 2002 through 2005 with local maximums occurring at the end of the fiscal year. The 2008 pattern is dramatically different, starting with a maximum value in July and a minimum the following June. Rider length of stay averages about five months, so it is the best indicator of changes in court commitment patterns. The seasonal pattern of commitments to Rider has not yet re-established itself since the 2008 drop in commitments, instead showing an overall steady increase in population through the end of 2010.

Table 1 shows details of admissions and releases by status from 1998 through 2010. Some interesting information can be gleaned from this table because of the detail shown. For example, we previously acknowledged the slight decline in incarcerated offender count that occurred in 2008 and 2009. Examination of Table 1 shows that in 2008 and 2009, Term releases were greater than Term admissions. As a result, there was a decline in the Term population both years. Also note the substantial decline in the Rider population in 2008. The Rider population declined because of the drop in Rider admissions in 2008, but has increased in 2010. The Parole Violator population experienced a substantial growth in 2008. This resulted from the increase in paroles in 2007. The cumulative effect of these separate and distinct changes in historical patterns accounts for the decline in incarcerated offenders in 2008 and 2009.

There are a number of topics that help explain the changes in growth patterns through the years. Drug crimes (including mandatory minimum sentence Drug crimes) brought about an increase in Non-violent court commitments starting around 1998. Commitments for Drug crimes dropped dramatically in 2008 and 2009 (Chart 14). Since Drug crimes are the largest contributor to Term commitments, this resulted in a marked decline in total commitments to Term. All of these factors converge to bring about the patterns of growth seen in Table 1.

# FY 2010 Annual Statistical Report

## Table 1

### Historical and Forecast Admissions and Releases by Status FY 2000 to 2010

## Supervised Offender Demographics

Characteristics of the supervised offender population are included in this section. At the end of FY 2010, there were 13,902 offenders under community supervision by the Department of Correction. There were 2,847 offenders under Parole supervision, and 11,055 offenders supervised on Probation. The supporting data for this section can be found in the June edition of the Monthly Standard Reports in Appendix 1.

Chart 25 shows the ratio of parolees to probationers in the supervised offender population. New court commitments and successful Rider participants contribute to the Probation population while Term and Parole Violator contribute to Parole.

**Chart 25**  
**Supervised Offenders by Status**

Chart 26 illustrates the ratio of males to females within the supervised population. Almost 25% of the supervised population is female, while only 10.4% of the incarcerated population is female (see Chart 3 for reference).

**Chart 26**  
**Supervised Offenders by Gender**

Chart 27 shows the ethnic distribution of the supervised offender population. In comparison to the incarcerated offender population there is a higher portion of white offenders and a smaller portion of Hispanic offenders in the community.

**Chart 27**  
**Supervised Offenders by Ethnicity**

Chart 28 indicates a higher ratio of non-violent offenses among the supervised population than the incarcerated population. Drug, Property and Alcohol crimes account for about 74% of the supervised offenders compared to only about 49% of the incarcerated population (see Chart 5 for reference).

**Chart 28  
Supervised Offenders by Crime Group**

There is a distinction in Crime Group by gender for supervised offenders similar to that for incarcerated offenders. Chart 29 shows the distribution by Crime Group for male supervised offenders. There were 10,489 males supervised at the end of FY 2010. This distribution is similar to Chart 28 because males comprise nearly 75% of supervised offenders. About 68% of supervised males were supervised for non-violent crimes (Drug, Property and Alcohol) while only 46% of incarcerated males were incarcerated for non-violent crimes (Chart 6).

**Chart 29  
Male Supervised Offenders by Crime Group**

Females show a different crime distribution (Chart 30). There were 3,413 females supervised at the end of FY 2010. Almost 90% are supervised for non-violent crimes (Drug, Property and Alcohol). By comparison, about 78% of incarcerated females were incarcerated for non-violent crimes (Chart 7).

**Chart 30**  
**Female Supervised Offenders by Crime Group**

The age distribution of the supervised population is shown in Chart 31. The age represents the offenders' age at the end of FY 2010. The average age of supervised offenders is approximately that of incarcerated offenders. The average for supervised offenders was 36.7, while the average age of incarcerated offenders was 36.4.

**Chart 31**  
**Supervised Offenders by Age Group**

### Supervised Offender Population Growth Patterns

Idaho has two types of supervised offenders: those paroled from prison and those sentenced by the courts to probation. Crime patterns for Parolees are very similar to those of the incarcerated offender group, since they were all once incarcerated. By contrast, Probation commitments tend to be less violent.

Since 1995, the supervised offender population in Idaho has more than doubled. The supervised population has increased from 5,106 to 13,902, an increase of 172%. The male portion of the supervised offender population has increased 154% during that time and the female supervised offender population has increased 247%.

Chart 32 shows the Probation, Parole and total supervised populations at year-end for the past 16 fiscal years. Though the Parole population is still a small portion of the overall supervised population, the growth has been tremendous and continues to offer challenges as the Department of Correction prepares for increases in future growth.

**Chart 32**  
**Supervised Offender Population Growth Since 1995**

Since Probation and Parole populations are substantially different, we'll split our discussion at this point and cover the Parole group and the Probation group separately. Parole will be covered first since it closely parallels the incarcerated offender group.

**Parole Population Growth Patterns**

Chart 33 shows the annual percent increase for the male and female Parole populations since 1996. The male Parole population has increased an average of 11% per year. The female population has increased at a substantially higher rate with an average annual percent increase of 17.1%. These rates generally follow the rates of growth in admissions for incarcerated offenders with a two year lag.

**Chart 33  
Parolee % Increase by Gender and Fiscal Year**

Chart 34 shows admissions to Parole by source. Note the dip in admissions from Term in 2000. This corresponds with the previous discussion relating to the two year length of stay in prison for Non-violent offenders and the dip observed in 1998 for admissions to Term (Chart 16). Note also the dramatic increase in the number of Parole Violators re-instated to Parole beginning in 2002. This marks an abrupt change in the portion of Parole Violators that are re-instated to Parole. This new practice has remained fairly constant since 2003.

**Chart 34**  
**Admissions to Parole by Type and Year**

We'll address lengths of stay and releases from Parole as they relate to Violent or Non-violent crimes next. Chart 35 shows the average length of stay on Parole for Non-violent offenders paroled from their initial incarceration by year. Parolees can leave parole by discharge or by violating parole. Those who successfully complete Parole average about two years on Parole prior to discharge. There is a pattern of steady increase in length of stay prior to discharge over the years, which is attributed to increases in sentence length (Chart 19). Non-violent offenders who violate parole average about 12 months on Parole prior to violation. Non-violent offenders make up about 74% of releases from Term to Parole.

**Chart 35**  
**Average Length of Stay for Non-violent Parolees**  
**by Release Type and Year**

Chart 36 shows the length of stay on parole for Violent offenders paroled from their initial incarceration by year. Those who successfully complete parole average almost three years on Parole prior to discharge, but there is a pattern of steady increase over the years. Violent offenders who violate parole average 15 months on Parole prior to violation. There is a clear pattern of increasing length of stay on parole prior to discharge for Violent offenders, with an average of about 41 months over the last three years. This is consistent with the intuitive notion that Violent offenders should serve longer sentences than Non-violent offenders. Violent offenders make up about 26% of releases from Term to Parole.

**Chart 36**  
**Average Length of Stay for Violent Parolees**  
**by Release Type and Year**

Chart 37 shows that Non-Violent offenders on their initial Parole tend to violate slightly more often than successfully completing parole and discharging. Again, this seems to be associated with substance abuse. The clear pattern of increased releases from parole mirrors increases in admissions to prison in prior years.

**Chart 37**  
**Non-violent Parolee Release by Type and Year**

Historically, Violent offenders tended to violate their initial parole at about the same rate that they discharged. That changed in 2004, when the pattern for Violent offenders began to violating Parole much more than discharging. Chart 38 shows Parole release type by year.

**Chart 38**  
**Violent Parolee Release by Type and Year**

Efficient management of Parolees is an important goal of the Idaho Department of Correction. Many offenders complete their programming in an aftercare environment. Department experts believe that completing this programming is vitally important in helping offenders succeed on parole, and managing this group is critically important to the Department.

**Probation Population Growth Patterns**

Probation represents a group of offenders supervised by the Idaho Department of Correction. These offenders are assigned to the Department by a court order. Most Probationers are sentenced to the Department by direct commitment from the courts. About one third arrive after successfully completing a Rider. In Fiscal Year 2010, the Probation population decreased by 73 to 11,055. That was the decrease since 1999.

Chart 39 shows the annual percent increase for the male and female Probation populations since 1996. The male Probation population has increased an average of 4.8% per year. The female population increased at nearly double that rate with an average annual percent increase of 8%. The greatest percent increase in male supervised offenders occurred in 1996 when the population increased 11.8%. The greatest percent increase in the female population also occurred in 1996 when the population increased 22.3%. The male probation populations experienced their smallest growth rates in 1999, when the population actually declined. Since then growth rates have gradually increased, approaching their historic averages. The female probation populations experienced their smallest growth rates (a decrease) this year.

**Chart 39  
Probationer % Increase by Gender and Fiscal Year**

The next series of charts will group admissions by several important factors: admission source, crime group and crime violence. Chart 40 shows court commitments to Probation by crime group. As with the incarcerated offender analyses, annual data will only be shown since fiscal year 1996, because the analyses involved require a level of data detail that has only been available since then. Drug crimes are the only ones with values shown because they have been the largest contributing crime group since 2000. Drug crimes also show the most significant decline in commitments in the last three years. Most other crime groups remained relatively constant over that period. The exception was the Alcohol crimes which had a marked increase. The decline in Drug commitments in the last four years has been attributed to the increased availability of community based substance abuse treatment. In the future, the funds to support community based substance abuse treatment may become limited, with a possible result of an increase in drug related felony commitments, especially to Probation.

**Chart 40**  
**Court Commitments to Probation by Fiscal Year and Crime**

Chart 41 shows the same information grouped by Violent and Non-violent crimes. As would be expected, the portion of court commitments for Non-violent crimes committed to Probation (81%) is higher than what was seen in Chart 17 for Non-violent court commitments to Term (60%). The effect of the decline in Drug crime commitments can be seen in the Non-Violent crime group.

**Chart 41**  
**Court Commitments to Probation by Fiscal Year and Crime Violence**

Although “New Court Commitments” is the obvious entry point for Probation, about one third (35%) of all Probation admissions come from successful Riders. Most Riders (88%) successfully complete the Rider program and are subsequently sent to Probation. Chart 42 shows admissions to Probation by type and year. Note that the dip in 1998 that was so evident for Term admissions (Chart 17) is not as pronounced for admissions to Probation. There was a pattern of steady increases from 2000 through 2006 similar to the pattern seen in court commitments to Term beginning in 2000 as shown in Chart 14. The last several years have seen a slight decline in commitments to Probation. Admissions from Rider show a similar pattern of increased admissions beginning in 2000 and a decline since 2006.

**Chart 42**  
**Admissions to Probation by Type and Year**

Next, we'll address lengths of stay and releases from Probation as they relate to Violent or Non-Violent crimes. This grouping shows important aspects of the analysis such as typical sentence length and typical length of stay.

Chart 43 shows the average length of stay by release year and violence level. The data in this chart represents information for offenders released from Probation during the year referenced. Both the Violent and Non-Violent crime lengths of stay have increased by nearly a year since 1996. The Non-Violent increase is attributed to the increase in sentence length for Drug crimes. Chart 43 shows how this group's length of stay has influenced the Non-violent crime length of stay, even though they represent only a portion of admissions.

The average Violent offender length of stay is now about three years. Non-violent offenders show a pattern of increased lengths of stay from about two years in 1996 to about three years in 2010. Historically, about 82% of all admissions to Probation are Non-violent offenders.

**Chart 43**  
**Average Length of Stay for Probationers**  
**by Crime Violence and Release Year**

Chart 44 shows length of stay detail by release type for Non-violent offenders by release year. The lengths of stay on Probation prior to revocation to Term or sentencing to Rider are almost the same for the period 1996 through 2006. For both revocation to Term and failures to Rider, there is an increase in length of stay prior during the last 4 years, concurrent with an IDOC initiative to aggressively pursue alternative sanctions in lieu of incarceration. This effort was complemented by the increased availability of community based substance abuse treatment provided by the Department of Health and Welfare during this time. There is a clear pattern of increased length of stay prior to discharge. This has tentatively been attributed to increased sentence length overall and to an increasing reluctance of prosecutors and judges to discharge for Drug crimes, especially Drug Trafficking.

**Chart 44**  
**Average Length of Stay for Non-violent Probationers**  
**by Release Type and Year**

Non-Violent Probationer releases by release type and year are shown in Chart 45. The number that discharged declined from 1999 through 2002. This reflects the reluctance of prosecutors and the courts to discharge offenders with substance abuse issues cited earlier and mirrors the increase in length of stay for this period seen in Chart 44. After 2002, the number discharged increases steadily. The number of releases that go to Rider showed only a moderate increase until 2004. In 2004, we see the effects of an ongoing change in business practices that resulted in a higher portion of releases going to Rider. The number of releases that revoke to Term has remained relatively constant. The decline in 2008 and 2009 in both reflects the IDOC initiative to more aggressively pursue previously cited sanctions in lieu of revocation and the increased availability of Health and Welfare community based substance abuse treatment.

**Chart 45**  
**Non-violent Probation Releases by Type and Year**

Chart 46 shows the average length of stay for Violent Probationers by release type and year. Again, we see a pattern of increasing length of stay prior to discharge over the long term. As with Non-violent Probationers, lengths of stay prior to sentencing to Rider or revocation to Term are relatively constant. Violent Probationers stay on Probation about 22 months prior to sentencing to Rider or revocation to Term, which is similar to Non-violent Probationers. From 2007 through 2010, Violent offenders stayed at least 50 months prior to discharge, while Non-violent Probationers stayed about 43 months.

**Chart 46**  
**Average Length of Stay for Violent Probationers**  
**by Release Type and Year**

Chart 47 shows Violent Probationer releases by release type and year. The pattern of releases to Rider shows a steady increase. Revocations to Term had increased in a manner consistent with the increase of commitments to Probation, but have decreased over the last two years. Discharges have increased over the last several years.

**Chart 47**  
**Violent Probation Releases by Type and Year**

Efficient management of the Probation population is very important to the Department. It is the largest population group managed by the Department and in recent years Probation revocations have contributed more admissions to Term than have new court commitments (Chart 15). This is a rapidly growing population group and the Department is actively seeking ways to help offenders succeed on Probation and avoid revocation to Term.

Table 2 provides historical details of supervised offender admissions and releases by status and year.

## FY 2010 Annual Statistical Report

Recidivism is an important and complicated issue that all correctional systems must deal with. There is very little consensus among states as to just what constitutes recidivism. A review of recidivism research literature shows there is wide variation in recidivism measures. The Idaho State Board of Correction reviewed this topic and established the following standards.

### Recidivist Definition

The Board of Correction established this definition for a recidivist.

recidivist - an offender committed to Term incarceration by the department for revocation of parole or probation, or for a new crime.

They established a more specific definition of recidivist for Idaho's data collection purposes.

recidivist - an offender who, after having been previously discharged from a period of incarceration or supervision by the Idaho Department of Correction, is committed by the courts to a new period of incarceration by the Idaho Department of Correction; or an offender who revokes Probation or Parole while under the supervision of the Idaho Department of Correction.

Based on this definition, we can see that there are three distinct pools of offenders who can recidivate;

1. Offenders who have been previously discharged,
2. Offenders who are on Probation and
3. Offenders who are on Parole.

The Board further established two types of recidivism measures described below.

1. Admission Recidivism Measure. This measure deals with the number of recidivists that are admitted to Term incarceration. It indicates how each recidivist group influences the correctional system and allows us to examine what portion of Term admissions over any time period came from each of the three potential recidivist pools. The purpose of this measure is to indicate how each recidivist pool contributes to Term incarcerations.
2. Release Recidivism Measure. This measure deals with the historical experience of individual offenders and their cumulative patterns of recidivism. It is an outcome measure that establishes the historical portion of discharged offenders (or offenders on parole or probation) who recidivate. It allows us to examine how offender attitudes and actions, or changes in Enforcement, Prosecution, Judicial or Correctional System initiatives such as programs and education, influence recidivism.

Each of the measures above is divided into contributions from each of the recidivist pools described above.

## FY 2010 Annual Statistical Report

The final area of Board deliberation was “time to recidivate”. As indicated previously, the standard used for recidivism research varies widely. Some researchers use as little as one year while others used the “if ever” standard. The following analyses examine the time to recidivate for each of the three recidivist types. The Board chose a five year window for recidivism analyses. A five year window allows a reasonable compromise between making sure we have reasonably complete data and completing timely analyses. The following discussions show Idaho’s historical recidivism experience, which is the foundation for this choice.

Chart 48 shows the distribution of time to revoke for Idaho Probationers during the period FY 1996 through 2010. By the end of 12 months, almost half of those who will revoke have done so. For Probationers, 81% of those who revoke do so within 30 months. The number of Probation revocations tapers off very quickly after that point and only 13% recidivate after 3 years.

**Chart 48**  
**Months from Probation to Revocation to Term, FY 1996 - 2010**

Chart 49 shows the distribution of time to revoke for Idaho Parolees during the period FY 1996 through 2010. By the end of 12 months, nearly half of those who will recidivate have done so. For Parolees, 83% of those who recidivate do so within 24 months. The number of recidivists after 12 months tapers off even more quickly than the Probationers and only 6% recidivate after 3 years.

# FY 2010 Annual Statistical Report

**Chart 49**  
**Months from Parole to Revocation to Term, FY 1996 - 2010**

Chart 50 shows the distribution of time to recidivate for Idaho offenders previously discharged from incarceration or supervision with recidivism events occurring during the period FY 1996 through 2008. For discharged offenders, it takes 60 months to get 74% of those who will recidivate. It takes 36 months to get to 56% of those who eventually recidivate. The highest number of recidivist events occurs between 12 and 24 months. This contrasts sharply with the maximum values for both the Parolee and Probationer events, both of which occur between 6 and 12 months. This group takes substantially longer to recidivate than either the Probationers or Parolees and is the primary reason that the Board chose a five year window for recidivism analyses.

# FY 2010 Annual Statistical Report

**Chart 50**  
**Months from Discharge to Recidivation to Term, FY 1996 - 2010**

Table 3 shows a recidivism summary analysis of data from FY 1996 through the end of FY 2010 based on the Board established criteria.

### Recidivism Rate Summary by Measure and Source

	Admission Measure	Release Measure
Previously Discharged Offenders	12%	6%
Probation Revocations	35%	19%
Parole Revocations	24%	39%

The Admission rate is the rate from all admissions FY 1996 through 2010

The Release rate is the rate for offenders released since 1995 who recidivated by FY 2010

To illustrate the Admission Measure, the 12% listed for the Previously Discharged Offenders means that 12% of the admissions to Term from FY 1996 through 2010 were offenders who had been previously discharged. Similarly, 35% of all admissions to Term for the same period were Probation Revocations and 24% were Parole Revocations. During this period, 71% of all Term admissions were recidivists. In FY 2010, 73% of all offenders admitted to prison were recidivists. Admission Measure trends will be discussed in more detail later.

In Table 3, the Release Measure of 19% in Probation Revocations means that 19% of the offenders who had been on Probation revoked and went to Term. The Probation group is our largest population segment (11,609 at the end of FY 2010) and although

## FY 2010 Annual Statistical Report

they only revoke at 19%, they make up 35% of the total admissions to prison. This underscores the importance of effective management of our supervised offenders. Release Measure trends will be discussed in more detail later.

Chart 51 shows detail by year for the Admission Measure for each recidivist type. It shows the portion of all Term admissions that came from each recidivist type. Recidivist court commitments show an average of 12% with only minor fluctuations until 2009 when it decreased slightly. Revoked Parole shows more fluctuation with an average of about 21% until 2009, when it increased sharply. Revoked Probation seems to have been relatively stable at around 35% until 2003. It increased briefly to 39%, averaged 36% from 2006 through 2008 and then decreased sharply in 2009. The reason for the decline in recidivist court commitments is not known, but it may be related to an increase in availability of diversionary options such as Drug Courts and community based substance abuse treatment. The decline in probation revocations is attributed to the implementation of a violation matrix focusing on sanction alternatives to revocation. The increase in Parole revocations is attributed to the dramatic increase in paroles beginning in 2007.

**Chart 51**  
**Portion of Term Admissions by Recidivist Type and Year**

With regard to the Release Measure for recidivism, one of the most frequently asked questions is “how does recidivism vary by crime or by gender?” The next series of analyses will address these questions.

Table 4 shows the recidivism experience for Probationers by crime and gender. We limited our pool of potential recidivists to offenders who went to Probation between July 1995 and January 2005. This allows each offender at least 60 months to recidivate.

## FY 2010 Annual Statistical Report

Based on the information in Chart 48 we anticipate that for offenders who went to Probation in December 2005, 97% of the offenders who will revoke have revoked. This approach allows us to use the most current available data without understating the actual size of the Probation revocation problem. The pool includes offenders admissions to Probation between July 1995 and June 2005. In Tables 4, 5 and 6, the crime group refers to the offender's initial commitment crime for this incarceration series, which is not necessarily the recidivist crime.

**Table 4**

**Probation Revocations by Gender and Crime for FY 1996 through 2010**

Gender	CrimeGroup	Pool	Revoked	Revocation Rate	
Female	Alcohol	335	50	15%	
Female	Assault	524	76	15%

Male	Murder & Man	111	30	27%	Male
Male	Property	8,916	1,841	21%	Total
Male	Sex	1,921	533	28%	21%
	Total	33,786	6,311	19%	

Table 5 shows the recidivism experience for Parolees by crime and gender. We limited our pool of potential recidivists to offenders who went to Parole between July 1995 and June 2005. This allows each offender at least 60 months to recidivate. We anticipate that for offenders who went to Parole in June 2005, 99% (Chart 49) of the

**Table 5**

**Parole Revocations by Gender and Crime for FY 1996 through 2010**

Gender	CrimeGroup	Pool	Revoked	Revocation Rate	
Female	Alcohol	51	28	55%	
Female	Assault	98	34	35%	
Female	Drug	435	133	31%	
Female	Murder & Man	34	8	24%	Female
Female	Property	407	134	33%	Total
Female	Sex	12	3	25%	33%
Male	Alcohol	587	203	35%	
Male	Assault	1,365	611	45%	
Male	Drug	2,011	669	33%	
Male	Murder & Man	183	30	16%	Male
Male	Property	2,280	1,051	46%	Total
Male	Sex	662	235	35%	39%
	Total	8,125	3,139	39%	

## FY 2010 Annual Statistical Report

offenders who will revoke have revoked. This allows us to use the most current data without understating the size of the Parole revocation problem. The pool includes only offenders on their first Parole in any incarceration series. It excludes offenders on a subsequent parole because they tend to be a distinct group of more persistent violators.

Table 6 shows the recidivism experience for Previously Discharged Offenders by crime and gender. We limited our pool of potential recidivists to offenders who were discharged between July 1995 and June 2005. This allows each offender at least 60 months to recidivate. Based on the information in Chart 50, we anticipate that for offenders who were discharged in June 2004, about 73% of the offenders who will recidivate have returned. The full five year window was used for this group so as to not understate the actual size of the Previously Discharged Offenders' recidivism problem. In Table 6, the crime group refers to the offender's commitment crime for the offender's previous incarceration series, which is not necessarily the same as the recidivist crime.

**Table 6**

**New Prison Sentence after Discharge from Supervision or Incarceration by Gender and Crime for FY 1996 through 2010**

Gender	CrimeGroup	Pool	Returned	Recidivism Rate	
Female	Alcohol	250	13	5%	
Female	Assault	287	7	2%	
Female	Drug	1,952	58	3%	
Female	Murder & Man	35	0	0%	Female
Female	Property	2,517	51	2%	Total
Female	Sex	42	1	2%	3%
Male	Alcohol	2,024	244	12%	
Male	Assault	2,940	213	7%	
Male	Drug	5,503	353	6%	
Male	Murder & Man	239	13	5%	Male
Male	Property	7,879	583	7%	Total
Male	Sex	1,754	92	5%	7%
Total		25,422	1,628	6%	

Data represents the offenders with new sentences to Prison since FY 1995 and the pool of discharged offenders who could have potentially returned during this time period. The Pool excludes offenders who were discharged after July 2005, because only a small portion of them would likely have reoffended by now. The offenders must have recidivated within 5 years of their previous discharge to be counted.

These analyses are useful in establishing expectations of what future recidivism might be. However, it is important to note that some offenders recidivate more than once or in more than one way. A Parolee may revoke more than once on a single incarceration series. Similarly, Previously Discharged Offenders may recidivate more than once, and an offender may recidivate from all three pools on the same incarceration series.

## Idaho Department of Correction Standard Reports For June 2010

This document contains the monthly Standard Reports for the Idaho Department of Correction. It is divided into three main sections.

Section 1 relates to the admissions and releases for the month.

Section 2 deals with incarcerated offenders. It provides information on what status offenders are in, what institution they are housed in, what the most severe crime is for which they are incarcerated, and demographics such as gender, ethnicity and age.

Section 3 is similar to section 2 but deals with offenders supervised in probation or parole status.

The glossary includes definitions for key terms used in this report.

<b>Ending Caseload</b>	<b>2,847</b>	<b>11,055</b>	<b>13,902</b>

Note: Offenders in bench warrants, court probation and parole commission are excluded from the supervised caseload because they are supervised by other interests.

\* Some offenders will move from probation to parole, or from parole to probation.

## Discharged Offender Information June 2010

### Offenders Discharged by Crime Group and Last Status

Crime Group	Offender Count	Status Released From				
		Probation	Parole	Parole Violator	Ret Juris	Term
Alcohol	34	28	1	-	-	5
Assault	49	36	-	-	-	13
Drug	137	118	1	-	-	18
Murder & Man	3	3	-	-	-	-
Property	107	87	-	-	-	20
Sex	18	12	-	-	-	6
<b>Total</b>	<b>286</b>	<b>284</b>	<b>2</b>	<b>-</b>	<b>-</b>	

The table above shows only the last status prior to discharge.

### Offenders Discharged by Crime Group and Average Months for each Status Served

Crime Group	Offender Count	Average Months in Status					Average Total Served
		Probation	Parole	Parole Violator	Ret Juris	Term	
Alcohol	34	43.2	23.4	6.2	5.6	37.5	49.7
Assault	49	40.2	12.3	6.5	5.9	50.0	56.9
Drug	137	44.1	12.7	7.6	5.9	37.8	52.8
Murder & Man	3	68.7	0.0	0.0	0.0	0.0	69.7
Property	107	50.0	14.9	9.7	6.0	52.5	64.7
Sex	18	73.2	13.5	12.4	6.0	53.4	80.6

There were 286 offenders discharged during June. Many served in more than one status before discharge. The table above shows all status types for each offender discharged during this period.

There were 3 non-Idaho, civil commitment or record tracking discharges in June. They are not included in these tables.

### Offenders Discharged by Crime Group and Average Sentence Length by Months to Parole Eligible Date (PED) and Months to Full Term Release Date (FTRD)

Crime Group	Months to PED	Months to FTRD
Alcohol	25.0	42.6
Assault	25.1	53.3
Drug	22.3	52.7
Murder & Man	24.0	120.1
Property	23.3	58.8
Sex	23.2	78.7

Idaho offenders are incarcerated with a two-part sentence. The first part is the fixed or determinate portion of the sentence. The offender will typically serve all of the fixed sentence. The second part is the indeterminate portion of the sentence. The Idaho Parole Commission may grant parole for any portion of the indeterminate part of the sentence.

# IDAHO DEPARTMENT OF CORRECTION

## Forecast Advisory Committee

### MEMORANDUM

*Mary K. Stohr*

**FROM:** Mary Stohr, Chair Forecast Advisory Committee

**DATE:** August 28, 2009

**SUBJECT:** Fiscal Year 2010 to 2013 Offender Population Forecast

The attached report details the Idaho offender population forecast for fiscal years 2010 to 2013. The forecast is a collaborative product of the Forecast Advisory Committee and staff of the Idaho Department of Correction (IDOC). The Committee establishes court commitment rates for offenders to Probation, Rider and Term and status move rates and associated lengths of stay for offenders incarcerated or supervised by the Department. The court commitment rates determine the forecast number of court commitments to these statuses for forecast years. The status move rates and associated lengths of stay are used to calculate how many offenders will move from one status to another and when they will do so. IDOC staff provide historical data to the Committee to help in selecting appropriate court commitment rates and to set rates for status moves and lengths of stay. The forecast is influenced by two key factors: 1) offenders entering the system, and; 2) when offenders leave the system. IDOC staff use the rates and lengths of stay provided by the Committee to complete the forecast. The Committee reviews all assumptions and exercises oversight of the methods used by IDOC staff to complete the forecast.

The forecast method relies heavily upon the judgment of both the Committee and IDOC staff members. The forecast is the Committee's best estimate of the future commitments and releases of adult felony offenders. Even though every effort was made to ensure that the decisions, methods and assumptions of the forecast were reasonable and sound, these judgments may prove inaccurate due to unforeseen future circumstances or changes in business practices. If current practices in the Criminal Justice System (law enforcement, prosecution, courts, Department of Correction and the Parole Commission) continue, this forecast represents a reasonable estimate of future offender counts.

# **Executive Summary**

## **Introduction**

A forecast was prepared for Idaho offenders for the period FY 2010 - 2013. The Idaho Criminal Justice Commission Population Forecast Advisory Committee (PFAC) established court commitment rates and status change rates with associated lengths of stay for the forecast. The forecast provides an estimate of the number of incarcerated and supervised offenders over the next four years.

## **Assumptions for Future Growth**

The forecast is influenced by two key factors: 1) offenders entering the system and 2) offenders leaving the system. The model relies on the judgment of the FAC members to set rates at which it is believed offenders will be committed to incarceration or supervision by the courts, and the rates for status changes and lengths of stay as offenders move through the system and are eventually discharged.

## **Conclusions**

The forecast anticipates moderated growth of incarcerated and supervised offenders over the next four years when compared to historical averages. The forecast number of incarcerated offenders and the forecast number of offenders actively supervised by Community Corrections are listed in the table below along with the anticipated annual percent increase from the previous fiscal year.

	2010	2011	2012	2013
Incarcerated Offenders	7,556	7,880	8,242	8,608
Annual Percent Increase	3.7%	4.3%	4.6%	4.4%
Supervised Offenders	14,419	15,143	15,950	16,804
Annual Percent Increase	4.8%	5.0%	5.3%	5.4%
Total Offenders	21,975	23,023	24,192	25,412
Annual Percent Increase	4.4%	4.8%	5.1%	5.0%

The forecast anticipates about the same rates of increase for female offenders as for males. Historically, the number of incarcerated females had been increasing at almost twice the rate of increase for males. That pattern ended abruptly in 2007. The incarcerated female offender population experienced no growth or declined for 2007 through 2009. The forecast anticipates that the female incarcerated offender group will experience an average annual increase of 3.9% from FY 2010 to 2013, while the male incarcerated offender group will have an average increase of 4.3%. Supervised offenders show similar patterns. The number of supervised female offenders will increase at an average rate of 4.1% while males will increase at 5.5%. Growth rates for both genders are down from previous periods. The average annual rate of increase from FY 1996 through 2009 for incarcerated females was 10.2% while males increased at 5.7%.

# **Forecast Overview**

## **Introduction**

A forecast was made of Idaho offenders for the period FY 2010 - 2013. The Idaho Department of Correction (IDOC) developed the forecast based on guidance from the Forecast Advisory Committee (FAC), using the flow model method. The forecast provides an estimate of the number of incarcerated and supervised offenders for the next four years. The flow model method provides a detailed and useful forecast. It provides an improved ability to identify and quantify changes in growth patterns and attribute them to a specific component of offender management practices.

## **Method**

The flow model method (the model) was used to produce the offender population forecast. This method estimates admissions and releases for each status by crime group and gender. The FAC, a committee of subject matter experts from all areas of the criminal justice system, established the rates for new court commitments and the rates and lengths of stay for status changes leading to the eventual discharge of offenders. IDOC staff used these court commitment rates and status change rates, with their associated lengths of stay, to complete the forecast. A more complete description of this process is provided in the "Methods" section of this report.

## **Assumptions for Future Growth**

The forecast is influenced by two key factors: 1) offenders entering the system and 2) how long offenders stay before leaving the system. The model process relies on the judgment of FAC members to establish the rates at which it is believed offenders will be committed by the courts. A separate rate was established for each crime group, gender, and court commitment status. The model then anticipates when offenders will change status within the system or when they will be discharged based upon recent historical patterns of status change rates and lengths of stay selected by the FAC. Many factors that might influence future court commitment rates or status changes were considered and discussed while establishing the court commitment rate for each crime group and forecast year. The FAC considered changes in laws, changes in agency policy, changes in prosecution and court practices, and changes in state population trends when setting these rates and lengths of stay.

The FAC discussed each combination of crime group, commitment status, and gender, and searched for indications of changing court commitment trends. They noted a dramatic decline in court commitments to all gender, crime and status combinations beginning in FY 2008. This decline was attributed to a decline in reported crime in Idaho, which mirrored national trends. The flow model method compensates for this and as a result, forecast court commitments approximate the values seen from FY 2002 to 2005.

## **Conclusions**

The model anticipates a moderate growth rate of incarcerated and supervised offenders over the next four years. The forecast indicates that the total number of incarcerated Idaho offenders will increase from 7,283 in FY 2009 to 7,556 in FY 2010, an increase of 3.7%. This number will increase to 7,880 in FY 2011, an increase of 4.3%. It will increase to 8,242 in FY 2012, an increase of 4.6%. And in FY 2013, it will increase to 8,608, an increase of 4.4%. The annual rate of increase for the entire forecast period is substantially lower than the historical rate of increase of 5.9% from FY 1996 through FY 2009. The number of offenders actively supervised by Community Corrections is expected to increase from 13,756 in FY 2009 to 14,419 in FY 2010, an increase of 4.8%. This number will increase to 15,143 in FY 2011, an increase of 5.0%. It will increase to 15,950 in FY 2012, an increase of 5.3%. And in FY 2013 it will increase to 16,804, an increase of 5.4%. The annual rate of increase for supervised offenders during the forecast period is lower than the historical rate of increase of 6.5% from FY 1996 through FY 2009. The details of forecast growth can be seen in the table "Historical and Forecast Admissions and Releases by Status" on pages 5 through 7.

The information in this table contains some subtle patterns. A review of historical admission and release patterns reveals the existence of several relationships. For example, the decrease in admissions to Term in 1998 is followed by a decrease in releases two years later. This pattern is consistent with the fact that the average period of incarceration is about two and a half years. As a result we see that releases from term incarceration tend to lag admissions by about two years. The model behaves in just this manner. So the relatively high rates of admission to Term in 1999, 2000, and 2001 tend to distribute through the model as relatively high rates of Parole in 2002, 2003, and 2004, and subsequently higher Parole Violator rates in the following years. Additionally, we anticipate that the decline in admissions to prison in 2008 will be followed by a decline in parole releases in 2010 as seen on page 5.

Finally, the trend of higher rates of increase for female offenders that began in FY 1999 is dramatically moderated in the FY 2010 through FY 2013 forecast. To illustrate this point compare the percent increase of incarcerated female offenders to that of male offenders for the forecast period. Female incarcerated offenders are anticipated to experience an annual average increase of only 3.9% from FY 2010 through FY 2013, while male incarcerated offenders are anticipated to experience an annual average increase of 4.3%. Both of these percentages are reduced from previous years, but the tendency for female offenders to increase at a higher rate than male offenders was dramatically reversed beginning in 2007. The number of incarcerated females experienced no growth at all in FY 2007 and 2008 and actually declined in 2009. The forecast anticipates this pattern will perpetuate through the forecast period. More "by gender" details can be found in Appendices 1 and 2 beginning on page 16.

## **Limitations**

The flow model forecast was implemented to establish a credible and useful method for forecasting future admissions and subsequent status changes and discharges of felony offenders committed to the Idaho Department of Correction. The forecast reflects the court commitment rates and the subsequent status change rates and lengths of stay selected by the FAC. The FAC established the consensus method of selecting rates. The results fairly represent the opinions and judgments of FAC members who developed the model. There are three limitations that may have significant impacts on the forecast accuracy.

1) Forecast court commitments for new offenders are based on Idaho's population growth for persons between the ages of 20 and 34. The forecast uses U.S. Census Bureau estimates of population growth from 1995 to 2009 and their forecast for future years' growth. The Idaho population growth rate for the forecast period is 2.2% for males and 2.0% for females. Admissions for new offenders into the model will be in error to the same degree that the Census forecast is in error.

2) The Idaho Department of Correction has 14 years of usable historical data. Virtually all components of the model rely upon the historical patterns of offender commitments and status changes. During the last 14 years there have been several significant changes in practices that make historical averages over the whole period poor indicators of the immediate future. Where policy decisions or other factors have caused a change from historical patterns the accuracy of the model may be diminished. Ironically this limitation is also one of the model's strengths. If a significant change from these historical patterns does occur, it is immediately evident. This strength can be illustrated by recent departmental undertakings. In FY 2008 IDOC became concerned about the high number of Probation revocations. The Community Corrections Division implemented a Violation Matrix method to guide Probation Officers in dealing with probationers at risk of revocation. The matrix offered a progression of intermediate sanctions in lieu of revocation. As a result of this effort, probation revocations were 115 less than anticipated in FY 2008 and 172 less than anticipated in 2009. This effort is estimated to have forestalled growth in the incarcerated offender population by 287 over a two year period. This example shows how changes from historic patterns of status change rates can significantly influence patterns of incarcerated offender population growth.

Historical data also help to establish bounds for reasonable forecast growth rates. With no significant changes in business practices we would expect the forecast to be close to the average of historical annual growth rates and to be bounded by observed minimum and maximum growth values. Additionally, if we are aware of changes in business practices, the difference between the forecast and actual experience may allow us to estimate the magnitude of these impacts as in the example above.

3) The forecast method relies heavily upon the judgment of FAC members. The forecast is the FAC's best estimate of future court commitments and releases of adult felony offenders. Every effort was made to ensure that the decisions and assumptions for the forecast were reasonable, but these judgments could prove inaccurate due to unforeseen conditions in the future. Additionally, new policies and programs are frequently implemented and their influence has obviously not been included in the forecast. Further, even when we are aware of new programs or policy changes, it is nearly impossible to estimate their impact on future years without historical data to guide us. Since the forecast is made up of the sum of a number of elements, no specific confidence level can be ascribed to the forecast. However, we can say that if current practices in the Criminal Justice System (law enforcement, prosecution, courts, Department of Correction, and the Parole Commission) continue, this forecast represents a reasonable estimate of future offender counts.

## **Methods**

A description of flow model methods used to forecast the offender population is included in this section. This section covers the FAC, an Overview of the Flow Model, the Flow Model Process, and Completion of the Forecast.

### **Idaho Criminal Justice Commission Population Forecast Advisory Committee**

#### **Purpose**

The purpose of the Idaho Criminal Justice Commission Population Forecast Advisory Committee (PFAC) is to establish impartial and reasonable court commitment rates and status change rates with associated lengths of stay to be used in forecasting future offender populations. Committee involvement enhances the credibility, reliability, and usefulness of the forecast.

#### **Scope**

The FAC exercises oversight over all aspects of the forecast process. Its primary goal is to identify trends and policy changes that may impact admissions and oversee assumptions used to forecast offender population growth. The FAC meets to review historical patterns of supervision and incarceration and to establish the court commitment rates and status change rates with associated lengths of stay for the forecast period. The FAC does not consider construction or budgetary issues when preparing the forecast.

#### **Organization**

Mary Stohr, a professor from the Boise State University Department of Criminal Justice, served as chairperson for the FY 2010 forecast. The FAC reviewed historical data and staff recommendations and established court commitment rates, status change rates, and associated lengths of stay for the forecast. Decisions were made by consensus.

#### **FAC Membership**

Members of the Idaho Criminal Justice Commission form the core of the FAC and additional members are selected by the Chairman of the Idaho Criminal Justice Commission as the need arises. Consequently, the FAC benefits from the expertise of a wide spectrum of criminal justice system stakeholders. Members include representatives from a wide variety of organizations as well as at large members as indicated in the table below.

### Additional Attendees

Wes Greer  
Carrie Parrish  
Maureen Shea

### Organization

Idaho Sheriffs Association  
Idaho State Legislature, Joint Finance and Commerce Committee  
Idaho Legislative Services Offices  
Idaho Commission of Pardons and Parole  
Idaho State Police  
Canyon County Prosecutor's Office  
Idaho Supreme Court  
Idaho State Appellate Public Defender  
Idaho State Legislature  
Idaho Sheriffs Association  
Idaho Department of Correction  
Idaho Supreme Court  
Idaho State Legislature  
Boise State University  
Idaho Division of Financial Management  
Boise City Council  
Idaho District Court

### Organization

Idaho Commission of Pardons and Parole  
Idaho Office of Performance Evaluations  
Idaho Office of Performance Evaluations

### Resources

IDOC provides research staff to assemble the model used to forecast offender populations and monitor the forecast's performance. The staff performs analyses of offender information to identify historical patterns in court commitments, status changes, and lengths of stay. They also highlight recent changes within those patterns. They provide technical assistance necessary to complete and evaluate the offender forecast. IDOC also provides administrative support for conducting FAC business pertaining to offender forecasts.

## **Meetings**

The FAC met on July 23, 2009 to review the prior year forecast performance, select court commitment rates, select status change rates and lengths of stay and discuss policy impacts. The FAC set the forecast rates and lengths of stay at the meeting. The completed forecast was presented to FAC in August.

## **Forecast Preparation**

Based on the rates and lengths of stay set by the FAC, the staff prepares and revises the offender forecast each year. The forecast is made for four years beginning with the current fiscal year. A forecast period of four years was chosen because research indicates that the flow model process begins to function as a linear trend after that time. This happens because forecast court commitments are based on Census Bureau population forecasts which are essentially linear and only a few status change lengths of stay exceed four years. As a result, the variations induced by historical actual commitment values tend to become smoothed into a linear pattern.

# **Flow Model Description**

## **Forecast Methods**

There are four methods commonly used in forecasting inmate population growth: mathematical, statistical, flow, and simulation. The mathematical model consists of averaging inmate growth over a given period of time and applying that average rate of growth to future periods. The statistical method uses trends to forecast future population based upon historical populations. The flow model and simulation models differ from the previous two methods by using both the number of offenders admitted and the number of offenders released (estimated using status change rates with associated lengths of stay) to forecast future populations. After reviewing the practices of several states of comparable size and proximity, IDOC staff determined that the most economical forecasting method would be the flow model. Some larger states utilize simulation models but that method was determined to be too costly.

## **Flow Model Concept**

The flow model concept employs historical and forecast admissions by status and then moves offenders admitted to each status through the IDOC system based on historical rates of status change and their associated lengths of stay. The process is illustrated in the chart below. The chart shows the portion of New Commitments that go to each status and the portion that moves from each status to another status or are discharged. The chart below shows the rates and lengths of stay in months used in the 2010 forecast.

## Flow of Offenders

Patterns of Court Commitments and Offender Flow through  
the Idaho Department of Correction

### New Court Commitments

IDOC jurisdiction over offenders begins with a felony conviction and a court commitment to Probation, Rider, or Term. The FAC uses historical court commitment data to establish the rate at which offenders will be committed to the custody or supervision of the IDOC with a new sentence. This rate is used to calculate the number of new court commitments that will occur annually by status, crime group, and gender. Rates of status movement and lengths of stay, set by FAC, are then used to estimate how many offenders will move to a new status and when they will move.

## **Cohorts**

Separate New Court Commitment forecasts are made for 12 different cohorts. Cohorts were established based on combinations of crime group and gender. All crimes are grouped into one of six crime groups: Alcohol, Assault, Drug, Murder and Manslaughter, Property, and Sex. Each crime group is separated by gender.

## **Flow Model Process**

### **Method for Estimating New Court Commitments**

Forecast court commitments are estimated based on historical court commitments and the Idaho state population. Historical commitment data were grouped by commitment status, crime group, gender, and fiscal year. The commitment status types used for the model were Probation, Rider, and Term. The data cover fiscal years 1996 through 2009. Population data for both the historical and forecast period were derived from U.S. Census Bureau data. The age group 20 to 34 was selected for forecast purposes because this age group made up the largest portion of commitments and was the most highly correlated with commitment data. This population, grouped by gender was used to forecast new court commitments. Details of population growth can be found in Appendix 6.

Having established the population groups for new court commitments, the next task was to determine the historic rate of commitment for each cohort. To do this, staff divided the yearly commitments for each cohort by the appropriate population group value for each year to obtain an annual rate.

The historical annual commitment rates give the FAC a starting point to select a rate to use in the forecast. Staff calculated commitment rates based on a graduated weighted average method. The graduated weighted average was computed by incrementing the weight for each year's value when calculating the average. So 1996 has a weight of 1, 1997 a weight of 2, 1998 a weight of 3, and so on. This technique was preferred over the simple average because it assigns the most weight to the most recent values. The members of FAC considered these rates but did not limit themselves exclusively to this option. The FAC examined historic patterns to identify trends or significant patterns of change. The FAC also examined each crime group for non-statistical influences such as the impact of changes in law, the expansion of drug courts, or the impact a declining economy might have on property crimes. The FAC considered all these potential influences and then agreed on a court commitment rate for future years for each cohort. This year, they selected rates somewhat greater than the graduated weighted average for male and female commitments to Probation for Alcohol crimes. They selected rates somewhat lower than the graduated weighted average for male and female commitments to Rider for Drug crimes. And they selected rates somewhat lower than the graduated weighted average for male commitments to Term for Drug for Property crimes. The graduated weighted average for the last 14 years' commitment rates was chosen for all other cohorts. Appendix 7 provides a chart illustrating male commitments to prison by year and crime and details for historical and forecast court commitment rates by crime group and gender, along with the FAC selected rate for each gender status combination.

After the court commitment rates were established, staff multiplied these rates by the population indicator group values for each forecast year to obtain future year commitments for each cohort. These values are incorporated into the model as “New Court Commitments” as indicated in the tables on pages 5 through 7.

### **Status Change Rates**

The model uses historical status change rates to calculate how many Probationers will discharge (or revoke), how many Riders will go to Probation (or fail the Rider program and go to Term), how many Term offenders will parole (or discharge), and how many paroled offenders will discharge (or revoke). Status change rates for the model are based on historical averages. For this year’s forecast the FAC chose to use Rider rates for FY 2007 through FY 2009, Probation rates for FY 2008 through FY 2009, Term rates for FY 2007 through FY 2009, Parole rates for FY 2007 through FY 2009, and Parole Violator rates for FY 2008 through FY 2009 to account for recognized changes in practices. Appendix 8 shows an illustration of the analysis used to select these periods.

### **Length of Stay Calculation (Survival)**

Historical length of stay prior to status change data were grouped by status change type, gender, and fiscal year. The data covered fiscal years 1996 through 2009. The data were then used to develop a length of stay profile for each combination of status change type and gender. These profiles enable us to estimate how long it will take offenders to “flow” through the system. The FAC selected length of stay patterns based on recent historical averages. Periods used for length of stay are similar to those used for status change rates. For the 2008 forecast the FAC elected to use the Rider rates for FY 2007 through FY 2009, Probation rates for FY 2008 through FY 2009, Term rates for FY 2007 through FY 2009, Parole rates for FY 2007 through FY 2009, and Parole Violator rates for FY 2008 through FY 2009. Staff calculated length of stay profiles for the following status changes:

Probation to discharge,	Rider failures to Term,	Parole to Parole Violator,
Probation failures to Rider,	Term to discharge,	Parole Violator re-instated to Parole
Probation revocation to Term,	Term to Parole,	Parole Violator revocation to Term
Rider to Probation,	Parole to discharge	

The length of stay profile by gender and crime group was then applied to estimate anticipated status changes for each cohort to determine the number of offenders that would change from one status to another, and eventually discharge, by month. The flow model then sums these estimates from each old status and into each new status. For example, an offender may enter Term incarceration from a new court commitment, as a failed Rider, from a revoked Probation, or from a revoked Parole. The Term offender may go to Parole or be discharged. The chart on page 11 shows the court commitment and status change rates and associated lengths of stay used in the FY 2010 forecast.

The model estimates the flow of existing offenders and new court commitments through each status change to their eventual discharge. The rates described in the Status Change Rates section are used to determine how many will move from one status to another and the length of stay profiles are used to determine when these status moves will occur.

To calculate the number of offenders at the end of each forecast year the model starts with the existing population for each status, adds the new admissions from each contributing status change type and new court commitments, and then subtracts the releases for each month. The result of this arithmetic process is the forecast for the end of the year. The tables on pages 5 through 7 are organized in this manner. Finally, since the forecast was not completed until the middle of August, staff corrected for actual monthly values through July. The FY 2010 forecast includes actual values for July and forecast monthly values for the rest of the forecast period.

## **Completing the Forecast**

### **Non-Bed and Non-Caseload Offenders**

The model provides a forecast of offenders in Probation, Rider, Term, Parole, and Parole Violator status types. To complete the forecast, the number of offenders that will fall into Non-Bed or Non-Caseload categories is needed (definitions in Appendix 9). Non-Bed and Non-Caseload designations tend to change as a consequence of policy or programmatic decisions and can vary less predictably over time than other components of the model. This portion of the forecast is prepared separately based on historical patterns. These offenders are an important part of the completed model. The previously described portions of the model provide the total number of offenders by status. To complete the forecast, Non-Bed offenders are subtracted from the total incarcerated to determine how many will be under direct IDOC custody and Non-Caseload offenders are subtracted from the total supervised to determine how many will be directly supervised by Community Corrections. This gives the total number of beds required in Idaho prisons and the total caseload for Community Corrections. Policy decisions can dramatically impact Non-Bed and Non-Caseload numbers. Historic volatility in this data results in diminished confidence concerning what might happen with this Non-Caseload group. If the estimate for this group is too high the forecast for Probation will be too low, and vice versa.

### **Tracking the Accuracy of the Forecast**

The forecast performance will be monitored monthly. IDOC staff determine the variance between forecast population and actual population each month and distribute the findings to members of the FAC and other interested stakeholders. This method of monthly analysis allows early detection of changes in historical patterns.

### **Factors That Influence Forecast Accuracy**

Abrupt changes from historical patterns generally have adverse effects on forecast accuracy. In FY 2008 and 2009, the incarcerated offender population experienced three such incidents. The first was a dramatic decline in court commitments to all statuses. This decline was traced to a reduction in reported crime in Idaho. The second was a collaborative effort of IDOC and the courts to find community based alternatives to probation revocations. The final influence was the perpetuation of Parole Commission's accelerated paroles. Together, these three influences completely offset all anticipated growth in the incarcerated offender population. All of these influences appear to be permanent changes, each with an ongoing departure from previous historical patterns, so they have been incorporated into the forecast as the newly emergent pattern for their respective components of the forecast.

IDOC is currently implementing the Pathways offender programming scheme, intended to improve the efficiency of programming and education endeavors with the ultimate goal of paroling offenders sooner and reducing recidivism. The Legislature occasionally passes new laws that have substantial impacts on what crimes will result in imprisonment and/or how long offenders will be imprisoned. Other entities such as the courts and the Parole Commission also occasionally implement new methods to improve public safety. Finally, there may be other influences, not yet known to the FAC or Staff, which could affect some part of the correctional system process. Staff and FAC members will monitor admissions and releases for each status for identifiable changes from historical patterns with the expectation that new influences will be incorporated into future forecasts as a change in court commitment rates, status change rates, or lengths of stay.

### Appendix 6: State Population Estimates by Gender

The chart below shows the number of Idaho citizens from 20 to 34 years of age by gender and fiscal year. It is based on Census data and shows an average annual increase of 2.3% for males and 2.0% for females over the forecast period. This is the indicator group for new court commitments.

**Idaho Population Age 20 to 34**

### Appendix 7: Court Commitment Rates

The chart below illustrates historical and forecast court commitment rates for males to prison by year and crime group. The chart shows both volatility from year to year and clear changes in historic patterns. The diamonds represent the FAC selected forecast rates. The GWA value is the starting point for FAC deliberations regarding what rate to use to estimate future court commitments. For the FY 2010 forecast, the FAC chose to use a slightly lower than GWA rate for male commitments for Drug and Property crimes and the GWA for all other crimes.

**Male Court Commitment Rates to Term**

## Appendix 7 Continued, Historical Court Commitment Rates with Calculated GWA by Gender Status and Crime

The table below shows the annual commitment rate and the calculated GWA by commitment type and gender and FAC selected rates.

### Court Commitment Rates for Males to Probation. FAC elected to use a rate of 17.0 for Alcohol crimes for the 2010 Forecast

# Appendix 8: Status Change Rates and Lengths of Stay

The FAC selected recent historical periods to calculate status change rates and their associated lengths of stay. A recent stable period for either the status change rate or the length of stay is considered a sufficient reason to select a period. That period is then used to calculate both status change rate and the length of stay for the forecast period. The chart below illustrates the method using Rider releases as an example. For Rider releases, the FAC selected the period FY 2007 through 2009.

Historical Rider Releases

Data represents historical releases from offenders' first commitment to Rider

The chart below shows the Rider length of stay example. The period FY 2007 through 2009 was chosen because it represents a relatively stable period for length of stay and it is consistent with the status change rates observed in the previous chart. Staff used this period to calculate both the status change rates and the lengths of stay for each cohort.

Historical Rider Length of Stay Prior to Release

# Offender Programs and Education Report

## Fiscal Year 2010

# Idaho Department of Correction

### Executive Summary

This report provides an analysis of selected program and education services within the Idaho Department of Correction. It includes education services enabling offenders to obtain a high school education and employment skills and the program areas of Cognitive Self-Change (CSC), Therapeutic Communities (TC), and New Directions (ND). The goal is to examine program achievement and help program managers determine how programs are performing.

The analyses describe offender participation and completion rates as well as the overall impact represented by recidivism. Recidivism data is included for offenders completing programs through FY 2008 but not for offenders completing programs in FYs 2009 or 2010 because not enough time has elapsed for these offenders to be released and return. Using data from FYs 2009 and 2010 would cause us to understate the magnitude of the recidivism problem.

The report is not an exhaustive examination of all program and education services. In the education area, it focuses on attainment of a high school education and job skills since these are nationally recognized as important contributors to offender success. In the programs area, it focuses on CSC, TC, and ND because these are widely recognized core treatment programs.

This report analyzes participation, completions, and outcomes for TC and high school education programs delivered from FYs 1999 through 2010. CSC program data allows for reporting only since FY 2002 and ND program data allows for reporting only since FY 2003. Data for Vocation Education allows for reporting since FY 2005.

From FYs 2002 through 2010, 9,695 incarcerated offenders completed CSC programs. Riders have a historical completion rate of 84%. Riders who completed CSC between FYs 2002 and 2008 revoked probation at a rate of 33%, while those who needed CSC, but who did not complete revoked at a rate of 38%. Term offenders have a 57% completion rate. Termers who completed CSC between FYs 2002 and 2008 revoked parole at a rate of 34%, while those who needed CSC, but did not complete revoked at a rate of 38%.

From FYs 1999 through 2010, 5,994 incarcerated offenders completed a high school education. Riders seeking a high school education during this period had a 50% completion rate while term offenders had a 15% completion rate. For the period FYs 1999 through 2008, 42% of offenders who completed a high school education during their rider revoked probation. During the same period, offenders who had completed a rider but did not complete a high school education during their rider, revoked at a rate of 48%. Term offenders who completed their high school education while incarcerated revoked parole at a rate of 36%. Lack of data on high school attainment for termers prior to incarceration precludes recidivism comparison for termers who entered prison without an education and failed to complete while incarcerated.

From FYs 1999 through 2010, 4,166 term offenders completed TC programming. The completion rate was 69%. Of offenders who completed a TC between FYs 1999 and 2008, 47% revoked parole. During the same period, offenders who participated in but did not complete TC programming, revoked parole at a rate of 56%.

From FYs 2003 through 2010, 2,125 riders completed ND. The completion rate was 91%, and 98% went to probation. For riders who completed ND from FYs 2003 through 2008, 45% revoked probation. For the same period, 51% of the riders who participated, but did not complete ND revoked probation.

Of the 632 inmates who earned a carpentry, electrical, plumbing, or welding certificate since FY 2005, 264 had paroled by 08/15/2010 and 182 (69%) were employed at that time. This compares to 68% (68 out of 100) for those who participated in job skills training, but did not earn a certificate.

**Jay Nielsen**  
**Howard Van Tassel**  
Board of Correction

**Brent Reinke**  
Director

Cognitive Self-Change (CSC) programming is designed to change the criminal thinking patterns of offenders in order to reduce negative behavior. During FYs 2002 and 2003, the Idaho Department of Correction (IDOC) offered a three-phase cognitive program. CSC-1 and CSC-2 were offered system-wide and CSC-3 was offered for offenders in the community. There was no pre-determined course length. Completion was based on demonstrated competency.

During 2003 IDOC implemented an enhanced program called Cognitive Self-Change, Idaho Model (CSCIM). It is similar to CSC but provides improved organizational structure for incarcerated offenders. It teaches the connection between thinking, feeling, behavior, and how patterns of thinking can drive habitual or automatic ways of behaving. CSCIM facilitates self-change by enabling the offender to learn about, as well as practice, changing faulty patterns of thinking and feeling which lead to negative behaviors. CSCIM is a singular program consisting of a brief orientation followed by two stages. CSCIM Stage 1 programming typically lasts six months and is implemented using two-hour sessions twice per week until complete. Progress is measured in six levels. The Offender Management Plan for incarcerated offenders whose assessment indicates a need for cognitive restructuring generally includes an objective for completing Stage 1 while in prison. CSCIM Stage 2 participation begins when the offender transitions into the community. CSCIM Stage 2 includes weekly two-hour sessions for 6-12 months. Full completion is recognized at the end of Stage 2.

The rider program uses courseware developed by National Institute of Corrections titled "Thinking for a Change". Inmates receive CSC-1, or CSCIM Stage 1. These programs are similar and each provides the minimum level of programming needed to prepare an incarcerated offender to succeed in the community. Data for the programs will be grouped together and referred to as CSC.

Data for the CSC analysis goes back only to FY 2002. Data for outcome measures, such as the number of CSC completers who have revoked, tend to understate the eventual revocation rates because not enough time has elapsed for most of these offenders to revoke. The analysis is intended to help guide development of offender management strategies. Completion rates are a valuable indicator of a successful system and it remains important to monitor release rates as the parole preparation process is continually improved.

Moral Reconciliation Therapy (MRT) is now also included in the analysis. MRT is a cognitive-behavioral program that was implemented in FY 2005. It was designed to promote positive self-image and identity to help clients learn positive social behaviors and beliefs, and to begin to make decisions from higher levels of moral judgment. It is a systematic treatment system which employs active group participation, written exercises, and homework. Recently MRT has been recognized in the National Registry of Evidence-Based Programs and Practices (NREPP). It is currently being used in approximately 42 states.

For this analysis an offender was counted only once, as either a participant or a completer, regardless of the number of times they had enrolled. Some offenders completed CSC more than once but are only counted once as a completion. The completion rate is based on the number of offenders that completed compared to the number of offenders that participated. The data also includes the number of offenders that were released to community supervision after successful completion of CSC. Cognitive programming is an important precursor to community re-integration and is often required by the Parole Commission prior to parole approval.

Chart 1:

CSC Offender Participation, Completion and Release

Chart 1 shows rider participation and completions. Historically about 93% of riders completing CSC programming are subsequently released to probation (Table 1). The drop in rider participants in FY 2004 resulted from a change in rider programming. The New Direction program was implemented at NICI about half way through FY 2003. Since the New Direction program includes a robust Cognitive Self-Change component, only offenders who are not enrolled in New Direction complete their cognitive restructuring needs with CSC. Of the riders who completed CSC and went to probation between FY 2002 and 2008, 34% have revoked probation. A group of 392 riders who participated in CSC during the same period, but did not complete revoked probation at a rate of 37.8%. The difference between rates is statistically significant,  $\chi^2 = 2.91$ ,  $p=0.088$ , odds ratio = 1.21, 95% confidence interval 0.97 to 1.50). The group that failed to complete CSC also had a much higher rider failure rate than those who completed CSC, with only 81% being released to probation.

**Chart 2:**

**CSC Inmate Participation, Completion and Release**

Chart 2 shows inmate participation, completions, and releases by fiscal year. Historically, about 76% of inmates completing CSC programming are subsequently released to parole (Table 1). The completion and release rate for inmates is lower than for riders. Also, inmates typically take about twice as long to complete CSC as riders. Of inmates who completed CSC and went to parole between FYs 2002 and 2008, 34% have revoked. Inmates who participated in CSC, but did not complete, paroled at a rate of 66%. This is slightly less than the 76% rate for completers but their paroles typically occur after a substantially longer period of incarceration. A group of 2,274 CSC non-completer inmates who paroled between FYs 2002 and 2008 was also tracked. That group revoked at a rate of 37.6% (compared to the revocation rate of completers of 34%, difference between rates is statistically significant,  $\chi^2 = 6.07$ ,  $p=0.014$ , odds ratio = 1.15, 95% confidence interval 1.03 to 1.29).

Robin Sandy  
Jay Nielsen  
Howard Van Tassel  
Board of Correction

Brent Reinke  
Director

In Idaho about 12%<sup>1</sup> of the adult population has not achieved a high school education while nationally the number is about 15%<sup>1</sup>. Among Idaho's commitments in FY 2010, about 65% of riders and 74% of inmates reported completing a high school education prior to incarceration. Among inmates, 24% had completed their high school education during a prior period of IDOC incarceration. Research points to educational deficiencies as a major factor in criminal behavior and recidivism. Employment opportunities are limited for those without a high school education, and jobs that do not require a high school education tend to pay less. National research also indicates that offenders without a high school education recidivate at a significantly higher rate than those with a high school education. Since those without a high school education are over-represented in incarceration and recidivism, educational services have become a major focus for IDOC.

This analysis will deal with two types of incarcerated offenders: Inmates and riders. Riders are offenders sentenced to a period of incarceration for assessment and intensive programming. Inmates are offenders sentenced to prison. The average length of stay for inmates is about 2.5 years. Though both groups are incarcerated in IDOC facilities there are differences in their environments, programming opportunities, and program intensity. We will focus on attainment of a high school education in the form of a general equivalency degree (GED), a high school equivalency (HSE), or a high school diploma (HSD) as the primary measure for education.

The rider program is isolated at separate institutions where offenders are exposed to intensive programming and education. Each year more than 500 offenders are enrolled in classes that can enable them to complete a high school education.

Chart 1 shows the number of rider education class participants and completers by fiscal year. Among the rider population both annual participation and completions had shown a reasonably steady increase over time, although there was a slight decrease in completions during FY 2007. There was a rather dramatic decrease in both participation and completions in FY 2009 and those values have remained relatively constant through FY 2010. The dramatic increase in participants in FYs 2004 through 2006 reflects a similar increase in commitments to the rider program during that time. The decline in participation in FY 2007 mirrors the decline in commitments that year. Over the past twelve years, riders have an average education completion rate of just over 50%.

Chart 2 shows the number of inmate education participants, and the number of those that completed, by fiscal year. Although the same educational services are offered to the inmate population, their completion rate is much lower than that for riders. The average completion rate for inmates taking high school education classes over the past twelve years is about 15%.

The difference in rider and inmate completion rates may be explained by the clear incentive for those in the rider program to demonstrate achievement. This tends to positively influence the court so as to increase the likelihood that the offender is sentenced to probation rather than prison at the completion of the rider. This seems to be supported by the fact that about 93% of those completing a high school education while on rider received probation while only 88% of the general rider population received probation (Table 1). Comparison of completion rates is also complicated by the fact that many inmates take high school education classes over a period of several years before completing. As a result they are counted as participants in multiple years. Additionally, some inmates already have a high school education and are only participating in classes to improve their literacy level so as to meet the entry criteria for more intensive programming. These two factors dilute the inmate completion rate.

**Chart 1:  
Rider High School Education Participation**

Chart 2 shows the number of inmate education course participants and the number of those participants who completed. Interestingly, the completions have remained relatively stable. This observation supports the notion that there are inmates who take classes each year with the intention of improving reading and math skills rather than of completing a high school education.

**Chart 2:  
Inmate High School Education Participation**

Chart 3 shows the number of riders who completed a high school education while incarcerated, the number released to probation, and the number revoked to term, by fiscal year of completion.

**Chart 3:  
Releases and Returns for Rider High School Completers**

Though it appears that there has been a reduction in general population revocations in recent years it is important to realize that this group has not had as much time to revoke as offenders from earlier years.

**Chart 4:  
Comparison of Probation Revocations for Rider High School Completers and General Population**

Chart 4 compares the probation revocation percentages of riders who completed a high school education while incarcerated with those of the general rider population.

As previously mentioned, offenders who do not have a high school education are more likely to recidivate than those who have obtained one. We typically compare revocation rates for riders who complete a high school education with the revocation rates of the general population. Riders who completed a high school education and were subsequently released to probation revoked at a rate similar to the general population of riders released to probation. We would expect riders who arrived without a high school education to have greater criminal tendencies than the general population. Had these offenders not obtained an education they would be expected to revoke at a substantially higher rate than the general population. Perhaps the most useful comparison is of riders who arrived without a high school education, participated in education classes, failed to complete a GED, and were then released to probation. Those offenders who completed a rider during the period FYs 1999 through 2008 without completing their high school education, revoked probation at a rate of 48%, while the similar group who completed a GED while on rider revoked at a rate of 42% (difference between rates is statistically significant,  $\chi^2 = 18.89$ ,  $p < 0.001$ , odds ratio = 1.28, 95% confidence interval 1.15 to 1.44).

Chart 5 shows the number of inmates who completed a high school education while incarcerated, the number of those who paroled, and the number of those who subsequently revoked. Though it appears there have been reductions in revocations after FY 2006 note that this group has not had as much time to revoke as offenders paroled earlier.

Chart 6 compares the percentage of parole revocations between inmates who completed a high school education while incarcerated and the general inmate population. From FYs 1999 through 2008, offenders who completed a high school education with IDOC have lower revocation rates than the general population of parolees. Offenders who completed a high school education while incarcerated revoked at a rate of 37%, while the general population revoked at a rate of about 43%. Lack of data on the offenders who entered term incarceration without a high school education precludes a comparison of revocation rates.

**Chart 6:  
Comparison of Parole Revocations for Inmate High School Completers and  
General Population**

Among inmates who entered prison during FY 2010, 74% arrived with a high school education. In that group, 24% had completed a high school education during a previous period of incarceration with IDOC. This pattern has been relatively constant over the last several years.

The final measure is the portion of Inmates paroled in FY 2010 that had a high school education by the time they were paroled. Of inmates paroled in FY 2010, 9% completed a high school education during their incarceration period. About 76% of all inmates paroled in FY 2010 had completed a high school education either through normal channels or with IDOC.

<sup>1</sup>General population is the total number of incarcerated offenders. These offenders are eligible for educational services. They may receive a range of services from literacy improvement to a high school diploma. Participation refers to all educational services.

<sup>2</sup>The percent of individuals released from Rider to Probation or from Prison to Parole is based on those offenders that received educational services allowing them to complete a GED, HSE, or HSD while incarcerated.

<sup>3</sup>Revocation rates are based on a commitment to Term incarceration for both probationers and parolees.

<sup>4</sup>Not all of the offenders who completed GEDs in FYs 2009 and 2010 have been paroled yet. It takes about 24 months to get a complete picture of revocation actions, so many of these offenders have not had enough time to revoke. Therefore the information for violations in FYs 2009 and 2010 is blank and the data for FY 2008 may be incomplete. It

## Section 3

# Therapeutic Community Programs

## Idaho Department of Correction

Therapeutic Community (TC) programs establish treatment communities for incarcerated offenders with chronic criminal and substance abuse histories. These programs provide a drug-free correctional residential setting that uses a hierarchical model with treatment stages that reflect increased levels of personal and social responsibility. Peer influence, mediated through a variety of group processes, is used to help offenders learn and assimilate social norms and develop more effective problem solving skills. TCs differ from other treatment approaches principally in their use of the community model where both treatment-staff and those in recovery act as key agents of change. TC members interact in both structured and unstructured ways to influence attitudes, perceptions, and behaviors, associated with drug use, in a comprehensive holistic approach. TCs are the most intensive interventions available for moderate and high-risk offenders with chemical dependency issues. National research indicates they offer the best hope of moderating recidivism for these offenders.

Therapeutic Community programs are offered at ICIO, SICI, SBWCC, and ICC. IDOC has a total capacity of 412 TC beds. There are three TCs offered for the male inmate population. The SICI TC is referred to as the TEAM program and is operated out of the Parole Release Center (PRC). It originally opened with 48 beds. An additional 48 beds were added in June 2001. It has since been expanded to form a 100-bed TC. The FRIENDS program at ICIO opened as a 39-bed unit and was increased to a 51-bed unit in October 2001. The TC at ICC has 177 participants divided into four separate living units. The program length at all three facilities is 9 to 12 months.

The women's therapeutic community began in 1999 at PWCC with 12 beds. It increased in August 2001 to 18 beds, increased again in October 2001 to 51 beds, and again in April 2002, to its current capacity of 60. In January 2006 the women's TC moved to SBWCC as a six-month program with a capacity of 63 offenders. It was expanded to 84 offenders in May 2007, reduced to 72 in October 2009, and then expanded back to 84 beds in October 2010.

Offenders who participate in TCs are frequently difficult to manage because of disciplinary and motivational issues and many are terminated from the program. In FY 2010, 26% of TC participants were terminated from the program and an additional 4% withdrew. Offenders with substance abuse issues, low education levels, and poor job skills, are more likely to revoke parole or commit a new crime. There are obviously many other factors to consider but TC completion is generally expected to reduce the likelihood of offender recidivism.

In this report we examine yearly TC accomplishments and compare the parole release rate and revocation rate for TC completers to that of non-completer participants. The non-completer comparison group includes TC participants from FY 1999 through FY 2008 who participated in a TC without completing. The exit reasons for the non-completer group included voluntary withdrawals, behavioral drops, performance drops, and class failures. The non-completers make a useful comparison group to help estimate the benefits of TCs because we can assume they had risks and needs similar to offenders who completed. Data for the unsuccessful participant group are aggregate numbers for the period FYs 1999 through 2008. This comparison indicates a higher level of success for TC completers than for non-completers. Chart 1 shows the total number of participants, completers, and completers who have paroled. Since FY 1999, TC participation has greatly increased and approximately 69% of participants have completed the program (Table 1). Of offenders who completed between FYs 1999 and 2008, 95% have since been paroled to the community. There are still some FYs 2009 and 2010 completers who have not yet completed other parole release requirements and have therefore not yet been released to parole. They were not included in this part of the analysis.

Brent Reinke  
Director

**Chart 1**  
**TC Participants, Completers and Paroled Completers**  
**by Fiscal Completion Year**

The parole rate for TC completers from FYs 1999 through FY 2010 is 95%. Chart 2 shows a 46% parole rate for the non-completer comparison group. This is significantly lower than the annual parole rate for the TC completer population. Offenders who complete a TC have a dramatically higher parole rate.

**Chart 2**  
**Comparison of TC Completer Parole Rates**  
**to Comparison Group Parole Rates**

Offenders who need a TC, but who do not complete are much more likely to top their sentence or be paroled after a substantially longer period of incarceration than those who do complete a TC. The improved parole rate of TC completers results in cost-avoidance for the department as more offenders are paroled than would have been expected without TC programming.

**Chart 3**  
**Comparison of TC Completer Revocation Rates to Comparison Group Revocation Rates**

Chart 3 compares the annual revocation rates of TC completers to the rate for the TC comparison group for the period FYs 1999 through 2008. This analysis does not consider years after FY 2008 because not enough time will have passed for offenders who will eventually revoke to do so. For the non-completers comparison group the totals from those ten years have been combined since the number who parole and subsequently revoke is so small that large apparent variances are induced in yearly rates. Combining the years allows us to smooth those variances and arrive at a suitable comparison value. The blue bars represent the revocation rate of the comparison group, which is constant for all fiscal years. The maroon bars represent the revocation rate of TC completers by year of completion. For the period FYs 1999 through 2008, the non-completer comparison group revoked at a rate of 56%. The TC completers revocation rate is much lower, averaging 47% over the ten year period. Overall the TC completers have revoked at a significantly lower rate than the non-completers. More details are available in Table 1. The lower revocation rate may indicate that TC programming is providing offenders skills necessary to succeed in the community.

Only 47% of TC completers revoked parole while 56% of the non-completers revoked parole (difference between rates is statistically significant,  $\chi^2 = 13.02$ ,  $p = 0.0003$ , odds ratio = 1.47, 95% confidence interval 1.19 to 1.82). Offenders who complete a TC have a substantially higher likelihood of being paroled and a higher level of success in the community than offenders with similar needs who do not complete a TC. This, of course results in a substantial cost-avoidance for the department as more offenders are released sooner and fewer return.

**Table 1**

<sup>1</sup>The percent of individuals paroled is a percentage of those who completed the program, while the percentage of those revoked is calculated on those who paroled.

<sup>2</sup>The potential exists for the total number of exits to exceed the number of participants because some individuals participated in the program more than once.

**Howard Van Tassel**  
Board of Correction

**Brent Reinke**  
Director

A New Direction (ND) is an intensive substance abuse program developed by Hazelden Publishing and Educational Services and the Minnesota Department of Correction specifically for incarcerated offenders. ND is a comprehensive cognitive-behavioral therapy treatment program that trains chemically dependent offenders to challenge their thinking in order to change criminal and addictive behavior patterns. This cognitive-behavioral approach helps inmates understand how their attitudes and assumptions fuel destructive behaviors.

The Idaho Department of Correction began using ND at the North Idaho Correctional Institution (NICI) in October 2002 and offenders began completing the program by the end of February 2003. NICI provides a short term incarcerated intensive programming environment for offenders sentenced to retained jurisdiction (riders). The program includes the following modules: Intake and Orientation, Criminal and Addictive Thinking, Drug and Alcohol Education, Socialization, Relapse Prevention, and Release and Reintegration. The offender spends 16 hours per week in facilitated groups and another 16 hours working on classroom assignments and homework. Offenders in this program are isolated from other offenders to enhance their change process. Due to program-staff limitations only the highest risk offenders receive ND programming. There are 116 beds available for offenders in the ND program. The staff at NICI uses LSI-R scores to screen offenders and make programming assignments. Entry criteria for ND include an LSI-R total score of 31 or greater and a substance abuse domain score of 0.6 or greater. These scores are quite high so only the very highest risk offenders participate in ND. Even so the number of qualifying offenders frequently exceeds existing bed space. Once available bed space is used, excess offenders with identified ND needs are assigned to other cognitive based programs.

Chart 1 shows rider participation and completion. Historically about 98% of riders completing ND programming are subsequently released to probation (Table 1). This is substantially higher than the normal rate for all riders of approximately 90%. Clearly the courts consider ND completion a very positive indicator of an offender's ability to succeed in the community, even for offenders whose LSI indicates high risk of re-offense. Of riders who completed ND and went to probation during the period FYs 2003 through 2008, 45% have revoked probation. A group of 1,580 riders with similar needs, as indicated by LSI-R scores, who did not complete ND during the same period (generally because of limited capacity), revoked probation at a rate of 51% (difference between rates is statistically significant,  $\chi^2 = 11.83$ ,  $p=0.0006$ , odds ratio = 1.27, 95% confidence interval 1.11 to 1.45). This is still a preliminary comparison as IDOC's implementation of the ND program and its associated aftercare process is still evolving. Revocation analysis excludes offenders who have had less than 30 months on probation. Completing a revocation analysis before the study group offenders have been on probation for at least 30 months will result in understating the actual size of the revocation problem.

Table 1 shows the number of participants and completers by year. The completion rate is based on the number of offenders who completed compared to the number of offenders who participated. Since IDOC began using the ND program, 91% of all participants have successfully completed the program. Completion rates are a valuable indicator of a successful system. It is also important to monitor release rates as the probation preparation process is continually improved. Table 1 also includes the number of offenders released to community supervision after successful completion of ND and associated probation revocations, as well as exit reasons for those who do not complete the ND Program.

## Section 5

# Vocational Education

# Idaho Department of Correction

Vocational/Professional-Technical Education programs are available through the Department of Correction Robert Janss School for incarcerated offenders and offenders on probation and parole who have been identified as needing job skills and/or employability skills. These courses provided training in several different areas during FYI 2010:

1. Workforce Readiness (50 hours): teaching employability and customer service skills.
2. Professional-Technical Skills classes are taught in the following areas: NCCER Core (basic work skills), Carpentry, Electrical, Plumbing, Masonry, CMI Commercial Cleaning, Machine Shop Fundamentals, Small Engine Repair, Welding, Culinary Arts, Introduction Advanced Software Applications—Word Processing, Spreadsheets, Databases, Presentations
3. Registered Apprenticeships are available in Custodial Technician, Cabinetry and Furniture Construction, and Facilities Maintenance.
4. Work Experience: NICI—All institutional jobs at NICI have a work experience option

This analysis reviews the accomplishments of selected programs available to offenders within the Vocational Education Program at the Idaho Department of Correction. This analysis will look at several measures of each program for FYs 2005 through 2010. These will include the number of participants in each program, the number of those participants who earned certificates in each program, the number of those earning certificates who subsequently paroled, and the number of those who paroled who later revoked their parole. This information is presented in Tables 1, 2, 3, and 4. Analyses were completed for the carpentry, electrical, plumbing, and welding programs. Analysis of other programs within the vocational education program has not been presented because there were an insufficient number of certificates awarded during this time period in these programs to be able to perform a meaningful analysis.

FY 09	26	13	50%	5	38%	0	0%
FY 10	30	27	90%	1	4%	0	0%
Totals	167	144	86%	82	57%	23	28%

<sup>1</sup>The percent of individuals receiving parole is calculated as a percent of the number of individuals who earned certificates, while the percent of those who revoked is calculated as a percent of the number of individuals placed on parole.

The employment rate of paroled inmates who participated in carpentry, electrical, welding, or plumbing classes but who did not earn a vocational certificate was 68% and the employment rate of paroled inmates who did earn a carpentry, electrical, welding, or plumbing vocational education certificate was 69%. The difference between these rates is not statistically significant at the 95% confidence level ( $\chi^2 = 0.03$ ,  $p = 0.8630$ ).

Another useful measure is improvement in earnings as it relates to attainment of a vocational certificate. We compared the average hourly wage of parolees who did not earn a vocational certificate with the average for those who did earn a certificate. The average hourly wage of parolees who earned a vocational certificate was \$10.50 while the average hourly wage of paroled inmates who did not earn a vocational education certificate was \$9.94. The difference in average hourly wage between these two groups is not statistically significant at the 95% confidence level ( $t = 0.92$ ,  $p = 0.3569$ ).

We also attempted to correlate the type of vocational training certificate earned with the types of employment offenders were able to obtain upon release. For the vast majority of offenders there appears to be little correlation between the type of vocational training certificate earned and the type of employment obtained after being released. During the period of interest, FYs 2005 through 2010, there were only 15 such instances. Four offenders with carpentry certificates obtained employment relating to carpentry, two with plumbing certificates obtained employment relating to plumbing, three with electrical certificates obtained employment related to electrical, and six with welding certificates obtained employment relating to welding.

During FYI 2010 progress was made in implementation of professional-technical assessments for offender students in conjunction with Workforce Readiness. A three-week intensive Offender Workforce Development Specialist (OWDS) Training, developed and funded by the National Institute of Corrections, was offered during the spring and summer to IDOC staff and nonprofit organizations from the community who assist offenders after release. A major focus of the OWDS was on the use of assessments to assist offenders in determining their career interests and aptitudes.

Another FYI 2010 project on which progress has been made is a collaborative partnership with the Idaho Department of Labor to track employment of ex-offenders.

Compare revocation % to historical general revocation rate of ~40%

## **Appendix 4, DEFINITIONS**

Admission – 1. An offender who has been committed by the courts to the Idaho Department of Correction. The offender may enter the department's jurisdiction in Probation, Rider or Term status. 2. A change from one status to another. For example, a status change from Probation or Rider to Term is typically referred to as an admission to Term.

Bed Offender - An offender in Term, Rider or Parole Violator status, under the jurisdiction of the Idaho Department of Correction, incarcerated in a state institution or other facility, for which the department pays the cost of incarceration on a per diem basis.

Caseload Offender - An offender in Probation or Parole status, under the jurisdiction of the Idaho Department of Correction, who is actively supervised by Community Corrections.

Civil Commitment - A form of confinement for offenders who are mentally ill, incompetent, alcoholic or drug addicted, as contrasted with the criminal commitment for their offense. Since they represent a per diem obligation to the Department, they are grouped with Term offenders.

Court Commitment – An action of the courts when an offender is convicted and sentenced to supervision or incarceration by the Idaho Department of Correction. The offender may enter the department's jurisdiction in Probation, Rider or Term status.

Discharged Offender - Offenders whose court commitment is satisfied or who die while under the jurisdiction of the Idaho Department of Correction. Offenders may be discharged from Probation, Rider, Term, Parole or Parole Violator status.

Failed Rider – An offender who was committed by the courts to the Rider program, but upon completion of the program, the court decided to incarcerate in prison. The offender's status will change to Term.

Incarcerated - An offender who has been committed by the courts to one of the Idaho Department of Correction institutions. Riders, Term offenders and Parole Violators are considered incarcerated.

New Commitment - An offender who has been committed by the courts to the Idaho Department of Correction for the first time, or after satisfying a previous court commitment has been committed for a new crime. They may enter in a Probation, Rider, or Term status.

Non Bed Offender - An offender who is under the jurisdiction of the Idaho Department of Correction, but is not housed in a state institution or other facility for which the department pays the cost of incarceration on a per diem basis. They could be in a county testifying, on detainer to another governmental entity, an escapee, or in a record tracking status.

Non Caseload Offender - An offender who has been placed on Probation or Parole status, but is not actively supervised by Community Corrections. They may have been deported, placed under court supervision, on detainer, or bench warrant. They will be kept on Community Corrections records until their sentence is satisfied and then be discharged.

## FY 2010 Annual Statistical Report

Non Idaho Offender - An offender who is sentenced by a jurisdiction other than Idaho, but is housed by the Idaho Department of Correction for security reasons. Since they represent a per diem obligation to the Department, they are grouped with Term offenders.

Offender – A person under the legal care, custody or supervision, or the authority of the Board of Correction, including any person within or outside the state, pursuant to agreement with another governmental entity or a contractor.

Parole Violator - An offender who has been placed on Parole and then violates the conditions of their parole. Parole Violator status is usually a temporary status until a hearing can be conducted to determine if the offender will be returned to Term or Parole status. It is considered an incarcerated status.

Paroled Offender - An offender that the parole commission has decided to place in society after serving a portion of their sentence. They are supervised by a Parole Officer until their court commitment is satisfied. The offender is referred to as a Parolee.

Probation - The status of an offender that the courts have decided to allow to serve their sentence while living in society. They are not incarcerated, but are supervised by a Probation Officer until their sentence is satisfied. The offender is referred to as a Probationer.

Reinstated Parole – The action that results when an offender has violated their parole but the Parole Commission subsequently decides to reinstate them in Parole status instead of returning them to prison.

Retained Jurisdiction – The status of an offender that the courts have decided to send to the Rider program. The courts retain jurisdiction until the offender completes the program. The courts will subsequently determine whether to place the offender in Probation or Term status or to withhold judgment. Also referred to as Rider.

Revoked Parole – The condition resulting when an offender who, while on parole, violates the conditions of their parole and is placed back in prison by the Parole Commission. When an offender revokes parole they again become a Termer.

Revoked Probation - An offender who, while serving probation, violates the conditions of their probation and the court changes their sentence to incarceration. The offender's status changes from Probation to Term, or sometimes Rider.

Rider – see Retained Jurisdiction.

Term – The status of an offender who the courts or the Parole Commission has committed to prison. The offender is referred to as an inmate or a Termer.
